15 Roadmap

- Completed Milestones
- Phase 1: Foundation (Months 1-6)
- Phase 2: Economic Systems (Months 7-12)
- Phase 3: Content Expansion (Months 13-18)
- Phase 4: Public Launch (Months 19-24)
- Phase 5: VR Integration (Months 25-36)

16 Conclusion

01 Executive Summary

Web3 gaming's first wave collapsed for a simple reason: the assets it sold had no floor. Prices were set by hype, and when the hype left, so did the value. Roughly 95% of NFT collections from that era now trade near zero.

Hyper Tek 100 is built to close that gap. Every asset we mint carries a Guaranteed Minimum Buy-Back, funded in USDC at the moment of sale and locked in a smart contract that no one, including us, can withdraw from outside the rules written into it. That floor is not a promise. It is a balance anyone can verify directly on Base.

We call the model Web3.5: the ownership, transparency, and guarantees of Web3, delivered through the accessibility of Web2.

Three interconnected games sit on top of a single marketplace and a single progression system, so an asset earned in one game carries value into the others.

The Platform

Hyper Tek 100 has three public-facing parts and two private ones.

The website carries information about the project, the games, and the marketplace, along with news, an AI support assistant, and translations across 28 languages.

The games run through a shared user interface connected to the marketplace and to each player's profile, so progress and assets follow the player across all three titles.

The marketplace is where items are created, bought, sold, and traded. It is an open market: items can be listed elsewhere, and items from elsewhere can be brought in and treated the same as a first listing here.

Every item is priced and settled in USDC. Hyper Tek 100 does not act as a bank, broker, or custodian, and does not hold user funds or private keys.

The Gaming Industry at a Crossroads

The global gaming industry has expanded considerably, now exceeding a market valuation of \$188 billion and encompassing more than 3.6 billion players worldwide as of 2025, according to Newzoo's Global Games Market Report.

<https://newzoo.com/resources/trend-reports/newzoo-global-games-market-report-2025>

Console, PC, and mobile platforms represent significant segments of this industry, with mobile gaming accounting for over half of total revenue. Despite robust growth, the sector continues to confront persistent challenges, most notably, the loss of time, expertise, and financial investment by players when transitioning between games. On average, gamers devote more than 8.5 hours per week to gameplay, frequently investing hundreds or thousands of hours in individual titles. Nevertheless, server closures or sequels often render accumulated characters, achievements, and purchased digital items obsolete, impacting millions—as evidenced by the discontinuation of prominent games such as "Paragon" and "Club Penguin."

#Interesting read for investors.

<https://griffingp.com/wp-content/uploads/2024/02/2023-Game-Development-Report.pdf>

Blockchain gaming originally emerged as a proposed remedy, promising genuine digital ownership, play-to-earn frameworks, and the portability of assets. However, speculative trading quickly overshadowed these benefits. After reaching a peak of \$5 billion in NFT gaming sales in 2021, the sector experienced a decline of over 90% in subsequent years. <https://blockeden.xyz/forum/t/nft-trading-volume-collapsed-95-but-gaming-nfts-are-quietly-thriving/309>

Numerous blockchain-based games prioritized cryptocurrency mechanisms at the expense of substantive gameplay, resulting in widespread user dissatisfaction and adverse media coverage. In parallel, established companies like Sony, Microsoft, and Nintendo maintain closed ecosystems, restricting asset transferability and confining player investments to individual game titles.

The rise of speculative blockchain gaming has also introduced new risks, including market manipulation, fraudulent activity, and volatile virtual economies. Chainalysis reported in 2025 that losses from crypto and blockchain gaming frauds exceeded \$17 billion. While many users are attracted by earning potential, they frequently encounter unstable environments. Both traditional and blockchain-integrated models, therefore, have struggled to provide sustained value and security for their communities. <https://www.chainalysis.com/blog/crypto-scams-2026/#:~:text=We%20estimate%20%2417B%20was,more%20profitable%20than%20traditional%20scams.>

The integration of cryptocurrencies into current gaming and VR systems remains promising, however, fewer than 5% of gamers have accessed blockchain-enabled games, primarily due to complex onboarding procedures and pervasive security concerns. Surveys indicate that 72% of players associate terms such as NFTs, blockchain, and cryptocurrency with negative perceptions, shaped by reports of fraud and market instability. More than 70% of gamers who are not native to cryptocurrency disengage from blockchain games during the wallet setup stage, indicating that complicated and jargon-laden onboarding processes constitute a significant barrier.

<https://www.binance.com/en/square/post/12-27-2024-challenges-and-innovations-in-blockchain-gaming-by-2025-18098491992585>

Existing economic models rarely allow players to generate tangible real-world value from their in-game activities. Proprietary systems restrict the external use and exchange of in-game currencies and rare items. According to Accenture's 2023 report, 59% of surveyed gamers expressed interest in earning tangible rewards, yet most games do not support such mechanisms.

<https://www.accenture.com/us-en/insights/software-platforms/metaverse-that-matters>

When games become obsolete or are discontinued, all accumulated progress and purchases are forfeited, leaving players without enduring returns. Further limitations are game progression systems, as advancement seldom transfers across different titles. According to a 2023 GDC survey, 78% of developers recognise a demand for cross-title progression, yet technical and commercial obstacles continue to impede broader implementation.

A 2021 Statista survey underscored the minimal opportunities for real-world monetisation available to most players; only 8% had earned tangible value through gameplay, and over 95% of in-game currencies remained non-exchangeable outside proprietary ecosystems, severely limiting their utility.

[https://www.statista.com/topics/3436/gaming-monetization/?](https://www.statista.com/topics/3436/gaming-monetization/?srsltid=AfmBOoraGqzxoA5EBsmELWXgemqwd_s2GSKwUMvXTn8O2EetTpzVTQ1u9#topicOverview)

[srsltid=AfmBOoraGqzxoA5EBsmELWXgemqwd_s2GSKwUMvXTn8O2EetTpzVTQ1u9#topicOverview](https://www.statista.com/topics/3436/gaming-monetization/?srsltid=AfmBOoraGqzxoA5EBsmELWXgemqwd_s2GSKwUMvXTn8O2EetTpzVTQ1u9#topicOverview)

These factors place the industry at a critical juncture: insufficient digital ownership, prevalent monetisation practices of questionable merit, and limited economic opportunities for players hinder sustainable development. Addressing these issues is essential for fostering a more resilient, player-centric future. With global gaming participation projected to reach 3.5 billion by 2027 and the metaverse market expected to surpass \$1.1 trillion by 2034, the sector faces notable prospects for innovation alongside substantial risks associated with stagnation.

<https://dimensionmarketresearch.com/report/metaverse-in-gaming-market/>

Another significant area within the gaming industry is the virtual reality realm which remains limited, with only 2.2% of gamers globally using VR headsets in 2024. High hardware costs and scarce cross-platform content restrict accessibility and synchronous multi-user interactions. Only select titles, including "VRChat" and "Rec Room," offer persistent shared environments which is the exception rather than prevailing norm.

Just
five
more
minutes

Fairness and player agency remain critical concerns within the industry. More than 60% of gamers report frustration with pay-to-win models that disproportionately benefit those willing to spend, thereby diluting the value of skill and commitment. This dynamic has bred distrust toward developers and publishers, particularly following the release of high-profile games with aggressive monetisation strategies.

Contemporary games seldom accommodate players' diverse schedules or external commitments. With 60% of U.S. gamers aged 18 or older and many balancing professional and personal responsibilities, there is a rising demand for time-flexible, asynchronous gameplay, a need largely unmet by mainstream offerings.

https://www.researchgate.net/publication/357483650_New_Consumers_of_the_Digital_Age_Game_Players

Finally, the finite nature of most games results in transient engagement. Steam usage data demonstrates that major releases typically retain player interest for three to nine months before experiencing considerable declines in activity.

Enter Hyper Tek 100

Hyper Tek 100 represents the next evolution: a **3-in-1 interconnected gaming universe** where strategy, racing, and exploration exist as distinct experiences within a unified ecosystem. Built on Unreal Engine 5 with cross-platform support, Hyper Tek allows your character, assets, and progression to flow seamlessly between three immersive worlds:

- **Overlord of the Seven Realms:** A three-tier battle strategy game spanning ground combat, ground-to-space assaults, and space warfare aboard an orbiting Battle Ring. Players rebuild a wrecked ship, train forces, and fight for territory, including a recurring event against the Hammerongs.
- **Hyper Racing 100:** A racing game across alien worlds, from floating rock formations to volcanic lava tubes. Players build and upgrade their vehicles, recruit and level up a pit crew, and compete in ranked events with real prize pools. A player's racing garage doubles as the hangar for their ship in Hyper Quest.
- **Hyper Quest 100:** An open-world space adventure. Players command an upgradable ship, complete missions ranging from minutes to multi-day expeditions, and earn real rewards for doing so. Progress here carries directly into Hyper Racing and Overlord of the Seven Realms.

Fair Play Economics:

We've eliminated pay-to-win mechanics through skill-capped systems, random acquisition models, and extensive tech trees that reward time investment and strategic thinking over wallet size. Top spenders might progress faster, but they can't simply buy victory.

Real Economic Opportunity:

Players can build actual businesses within the game ecosystem, mining resources, crafting components, running auction houses, and even creating virtual storefronts for real-world companies. Hyper Bucks earned in-game convert to real USD, creating genuine income potential.

Market Opportunity:

The interconnected gaming model addresses a multi-billion-dollar annual problem: abandoned game assets. By creating persistent value across multiple game types, Hyper Tek 100 taps into the massive MMO market (150M+ players), racing game enthusiasts (160M+ players), and RPG + players in the billions, all within a single ecosystem.

As the blockchain gaming market matures, players now seek platforms that deliver entertainment first and economics second. Hyper Tek's focus on compelling gameplay with integrated ownership systems positions us perfectly for this evolved market.

What Makes Hyper Tek 100 Different

The Guaranteed Minimum Buy-Back Fund (GMBB)

This is the mechanism the whole platform is built around.

How it is funded. When an item is first listed, a share of the sale price is placed into that item's own GMBB balance: up to 70% when a user lists their own item, up to 90% when Hyper Tek 100 lists an item itself. On every later resale, a further 5% of the sale price is added to the same balance. The rest of the sale is commission, split between the seller, the artist, and Hyper Tek 100, and none of the GMBB share is taxed as commission.

How it is held. The GMBB Fund is held exclusively in USDC inside a smart contract on Base. The contract has no withdrawal function of any kind for Hyper Tek 100 or any team member. Anyone can verify the balance directly on-chain; it is not an estimate or a claim; it is a number that can be read.

How it pays out. If an item is listed for auction and the auction fails to reach the item's reserve, the owner may release the GMBB balance and surrender the item. Payouts follow a five-year schedule from the date each contribution was made: 80% in year one, 84% in year two, 88% in year three, 92% in year four, 96% in year five, and 97% from year five onward. The remainder is a service fee, used to cover the cost of running and auditing the fund.

Early partial withdrawal. Where an item's balance is large enough, the owner may withdraw up to 45% of it once, without giving up the item. This is a single, all-or-nothing option: taking any amount closes it permanently for that owner. The withdrawn funds go to the owner's own wallet, so what they do with the money afterward, including investing it elsewhere, is entirely their decision and takes place outside the platform.

Verification and audit. The on-chain balance is the ultimate source of truth and can be checked by anyone at any time. Once the fund reaches a threshold set by Hyper Tek 100, an independent Certified Public Accountant will review its records on a recurring basis to confirm the on-chain figures are not misrepresented, and will publish the results. The smart contract itself will be independently code-reviewed before it holds live user funds, with periodic re-review as the underlying network changes.

On platform closure. The guarantee does not depend on Hyper Tek 100 continuing to operate. Owners can claim their GMBB balance at any time, including after the company has closed, because the contract requires no one's permission to pay out.

02 Game Overview

2.1 The Three Worlds of Hyper Tek

Hyper Tek isn't just one game; it's an interconnected universe where three distinct gaming experiences share a unified foundation. Each game offers unique gameplay while contributing to your overall progression and economic power.

Overlord Realm: Strategic Domination

Genre: MMORTS (Massively Multiplayer Online Real-Time Strategy) Overlord Realm puts you in command of one of seven alien civilisations, each with unique bonuses and visual styles. Your journey begins with a crashed spaceship on a hostile planet, home to dangerous monsters and rival players.

Core Gameplay Loop:

- Upgrade your spaceship's defensive and offensive capabilities
- Establish land bases to mine resources, grow food, and train troops
- Research technology across 8+ categories with 20-25 levels each
- Form or join colonies (guilds) with up to 80 members
- Attack monsters for rewards and experience points
- Engage in strategic PvP combat to raid resources
- Defend against the bi-weekly Hammerong alien invasion events

What Makes It Unique: Unlike traditional strategy games, your spaceship serves as your persistent home base across all Hyper Tek worlds. Upgrades in Overlord Realm directly benefit your capabilities in Racing and Quest modes. The colony warfare system creates genuine social dynamics where diplomacy, economics, and military might all play crucial roles.

Hyper Racing: Speed Without Limits

Genre: Futuristic Anti-Gravity Racing Simulator

Inspired by Gran Turismo's vehicle customisation and Star Wars pod racing's adrenaline, Hyper Racing delivers photorealistic racing across mind-bending circuits suspended above alien cities, through asteroid fields, and around fractured moons.

Core Gameplay Loop:

- Start with a basic hover vehicle and modest capital
- Pay entry fees to compete in races against AI or players
- Win prize money based on placement (1st, 2nd, 3rd)
- Use earnings to upgrade vehicle components or purchase new models
- Hire team specialists (engineers, fuel experts, aerodynamics specialists) for performance bonuses
- Progress through amateur leagues to professional team racing
- Master technical tracks with environmental hazards and evolving layouts

What Makes It Unique: Your garage is actually the lower deck of your Quest Runner spaceship. Team specialists hired here provide bonuses across all three games. Materials mined in Overlord Realm become fuel for your racing engines. Success on dangerous planets in Hyper Quest unlocks exclusive racing circuits. It's not just racing; it's an integrated career.

Hyper Quest: Dangerous Frontiers

Genre: RPG Exploration with Shooting, Trading, and Survival Mechanics

After reaching a certain level in Hyper Racing, you unlock the ability to leave your home world and venture into the cosmos. Hyper Quest transforms your garage/spaceship into a fully functional Quest Runner capable of interstellar travel.

Core Gameplay Loop:

- Accept delivery contracts from the Request Board (transport cargo between planets)
- Purchase portal tickets and travel through wormholes to distant worlds
- Navigate the "Dead Zone" between planets where pirates may attack
- Mine asteroids for rare materials unavailable on planets
- Salvage abandoned spacecraft for valuable components
- Upgrade your Quest Runner's defences, weapons, and storage
- Balance risk versus reward across planetary zones with published danger ratings

What Makes It Unique: This is real-time exploration in a persistent universe. Other players are simultaneously travelling, mining, and pirating. Your decisions have consequences. Accept a high-paying but dangerous contract, and you might lose everything to a pirate ambush. Success here provides the rare resources needed for advanced upgrades in both Overlord and Racing modes.

2.2 The Interconnected Universe Concept

The Technical Integration

Hyper Tek's three games share a unified player profile and asset database. This isn't superficial, it's deep mechanical integration: Shared Resources: Materials mined in Overlord Realm (Furuseth Crystals, Energy Crystals, rare minerals) are the exact resources needed for vehicle upgrades in Hyper Racing and ship defences in Hyper Quest. Everything you earn anywhere can be used everywhere.

Unified Progression: Your character level, accumulated wealth, and experience points persist across all three worlds. Reaching Level 15 in Racing unlocks new ship modules in Quest mode. Completing dangerous deliveries in Quest earns credits usable in Overlord's research trees.

Persistent Spaceship: Your Quest Runner is your home in all three games. It's simultaneously your racing garage (Racing), command center (Overlord), and exploration vessel (Quest). Upgrades to hull strength benefit you when facing pirates, when defending against player attacks, and when surviving harsh planetary conditions.

Team Specialists: The Fuel Engineer you acquire in Racing provides fuel efficiency bonuses when you're escaping pirates in Quest mode. The Structural Engineer who repairs your racing vehicles also strengthens your spaceship's defensive armour in Overlord. These aren't separate characters; they're the same specialists providing cross-game benefits.

Example Player Journey:

Monday: You play Overlord Realm for 2 hours, establishing a new land base on a high-quality resource node. Your mining operations yield rare Composite Materials.

Wednesday: You switch to Hyper Racing and use those Composite Materials to craft lightweight body panels for your racing vehicle, improving acceleration by 8%. You win three races and earn 15,000 Hyper Bucks'

Friday: In Hyper Quest, you accept a lucrative delivery contract to transport medical supplies to a distant planet (15% pirate attack probability). Your upgraded racing vehicle skills help you outrun pirates in the Dead Zone. You successfully deliver, earning double rewards.

Saturday: Back in Overlord, you use those rewards to fast-track research into advanced shields. The improved shields protect both your land bases AND your racing Quest Runner AND provide defensive bonuses in future pirate encounters.

This continuous feedback loop means every hour invested compounds across your entire Hyper Tek experience. Nothing is wasted. Everything connects.

2.3 Game Lore and Setting

The Hyper Tek Universe: Where Reality Meets Digital Matrix

In the year 2117, humanity discovered that reality exists as parallel layers, digital matrices woven into the fabric of spacetime. The Hyper Tek Project was humanity's attempt to consciously navigate these layers, creating gateways between physical and digital realms.

The experiment succeeded beyond imagination, opening portals to seven alien civilisations, each existing in their own dimensional frequency. These civilisations, the Avian Defenders, the Crystalline Architects, the Nomadic Engineers, the Celestial Scholars, the Volcanic Forgers, the Aquatic Navigators, and the Ethereal Mystics had never encountered each other until the Hyper Tek Gateway brought them together.

The Crash

You are an Overlord of one of these civilisations, piloting an advanced spacecraft through a Hyper Tek portal jump, but something went wrong during the jump. The coordinates fail, your ship tears through the digital fabric of the parallel universes, and crash-lands on a remote planet, a world suspended between dimensions, populated by evolved AI creatures and dangerous indigenous life forms.

Your crew scattered. Your ship is damaged. Your supplies are depleted. But you survived.

Now you must rebuild. The planet contains the resources you need to restore your ship; however, even though you can lift off, you cannot leave the planet's orbit, and you're not alone; other Overlords from all seven civilisations crashed here too. Some will become allies. Others, rivals. And every two weeks, the Hammerong arrive, the mysterious AI species that initially built the planet's central Arena as a resource collection facility.

The Three Modes Explained Through Lore:

Overlord Realm: Your crashed spaceship becomes your command center. You must establish land bases, train troops, research technology, and compete for limited resources against other stranded Overlords. The planet operates in real-time, meaning rivals can attack while you're offline. Colonies form mutual protection and coordinated resource gathering.

Hyper Racing: Before the crash, you were known not just as a military commander, but as a champion racer in your home dimension and quest runner. While you are stuck on the planet as Overlord, you continue to race and smuggle goods between galaxies in the parallel universe. Racing breathtaking fantasy racing circuits on ancient alien worlds, gravity-defying tracks used by civilisations long extinct. Racing provides prize money and materials needed for ship repairs and upgrades to weapons. Your racing garage exists within your Quest Runner's cargo bay.

Hyper Quest: After completing a race, you can leave the planet through local wormhole generators orbiting around the planet. This unlocks access to seven additional planets, each with unique resources, racing circuits, and dangers. You can accept courier contracts to transport cargo between worlds, mining rare materials along the way.

The goal: Accumulate enough resources and find a permanent gateway home.

The Arena:

The planet's center contains a massive Arena, protected by an impenetrable energy field. Every two weeks, the Hammerong fleet arrives to gather more rare resources, temporarily disabling the Arena's shield. This triggers a server-wide event where all players can enter the Arena to battle the Hammerong for extraordinary rewards. If players successfully destroy both Generator Cores within the time limit, the Hammerong retreat early and all players receive bonus resources.

The Evolving Endgame Mystery:

Legends suggest that deep within the Arena lies the Master Portal, a gateway capable of returning all Overlords to their home dimensions. But accessing it requires cooperation across all seven civilisations and levels of power beyond any individual player. This creates a long-term narrative goal that evolves with player achievements.

Your Story Begins Now

You are stranded. You are resourceful. You are an Overlord. Your journey through strategic warfare, high-speed racing, and dangerous exploration starts now. Build your empire. Master your vehicle. Explore the unknown. And perhaps, one day, find your way home.

03 Technology

3.1 Game Engine and Development Platform

Unreal Engine 5: Industry-Leading Performance

Hyper Tek is built on Unreal Engine 5, Epic Games' innovative game development platform. This choice provides multiple strategic advantages:

Visual Fidelity: Unreal Engine 5's Nanite virtualised geometry system and Lumen global illumination deliver photorealistic graphics that make our sci-fi worlds truly immersive. Racing circuits shimmer with realistic lighting. Alien planets feature stunning environmental details. Spaceships reflect authentic materials and wear.

Cross-Platform Support: A single codebase deploys across PC (Windows, Mac, Linux), consoles (PlayStation 5, Xbox Series X/S), mobile devices (iOS, Android), and VR headsets (Meta Quest, PSVR2, PC VR). This maximises our addressable market without fragmenting development resources.

Robust Multiplayer: Unreal's native replication system handles thousands of simultaneous players across persistent worlds. Server-authoritative architecture prevents cheating while maintaining smooth gameplay even during massive colony warfare events.

Mature Ecosystem: Unreal Engine's asset marketplace, extensive documentation, and global developer community accelerate development. We can leverage pre-built systems for UI, physics, animation, and audio while focusing resources on unique gameplay innovations.

Programming Languages:

- **C++:** Core game logic, performance-critical systems, low-level networking
- **Blueprints:** Rapid prototyping, game design iteration, designer-friendly scripting
- **Python:** Development tools, asset pipeline automation, data processing

Development Tools:

- **Version Control:** Git with GitLab/GitHub
- **Project Management:** Jira for task tracking
- **Art Pipeline:** Blender (3D modeling), Substance (texturing), Houdini (procedural generation)
- **Audio:** Wwise for adaptive music and 3D spatial sound

3.2 Server Architecture

Cloud-Native Infrastructure

Hyper Tek employs a modern cloud infrastructure designed for global scale, low latency, and 24/7 uptime:

Amazon Web Services (AWS) Core:

- **EC2 Compute:** Auto-scaling game server instances that spawn based on player demand
- **RDS PostgreSQL:** Primary database for player profiles, inventories, transactions (multi-region replication)
- **ElastiCache Redis:** Ultra-fast caching layer for frequently accessed data (leaderboards, marketplace listings)
- **S3 Storage:** Asset storage for 3D models, textures, audio files with CloudFront CDN distribution
- **Load Balancers:** Automatic traffic distribution across server clusters

Regional Distribution:

- **North America:** Virginia and Oregon data centers
- **Europe:** Frankfurt and London
- **Asia-Pacific:** Singapore and Tokyo
- **South America:** São Paulo

Players automatically connect to their nearest region for optimal latency (typically <50ms). Regional servers synchronise global marketplace data every 60 seconds, ensuring a unified economy while maintaining performance.

Persistent World Design:

Hyper Tek operates as a persistent universe; the game world continues evolving 24/7 whether you're logged in or not:

- Land bases can be attacked while offline (protected by shields when active)
- Resource generation continues automatically
- Marketplace auctions complete on schedule
- Events trigger at specific times regardless of individual player presence

Server Architecture Diagram:

Player Clients (PC/Console/Mobile/VR)

API Gateway (authentication, rate limiting)

Microservices Layer:

- Player Profile Service
- Combat Resolution Service
- Marketplace Service
- Economy Service
- Chat & Social Service
- Analytics Service

Database Layer:

- PostgreSQL (player data, transactions)
- Redis (real-time caching)
- MongoDB (analytics logs)

Blockchain Integration (NFA ownership records)

Scalability and Performance:

- Auto-scaling handles 10x traffic spikes (tournament events, major updates)
- Load testing validates 100,000+ simultaneous players per region
- Database sharding splits player data across multiple servers for horizontal scaling
- Kubernetes orchestrates containerised services for efficient resource utilisation

3.3 Blockchain Integration

Why Blockchain? True Ownership and Provenance

Hyper Tek uses Base blockchain technology for a specific, valuable purpose: **establishing demonstrable ownership of rare in-game assets**. This isn't about speculation or crypto buzzwords; it's about creating verifiable digital property rights.

What Gets Stored On-Chain:

Not everything needs blockchain, only assets with long-term value and ownership importance:

✓ **Non-Fungible Assets (NFAs):** Legendary team specialists, rare vehicles, high-value equipment

✓ **Ownership Records:** Who currently owns each NFA with complete transaction history

✓ **Buyback Reserve Values:** Platform-guaranteed minimum values for each NFA classification

✓ **Marketplace Transactions:** Permanent record of all NFA classification sales for transparency

What Stays Off-Chain (traditional databases for speed):

- Regular gameplay data (current missions, race results)
- Common items and resources
- Character stats and progression
- Chat messages and social interactions

Smart Contract Architecture:

Hyper Tek deploys three primary smart contracts:

- 1. NFA Contract:** ERC-721 standard defining each NFA's unique properties, ownership, and transfer rules
- 2. Marketplace Contract:** Handles auction listings, bids, purchases, and commission payments
- 3. Buyback Reserve Contract:** Holds platform reserve funds and executes guaranteed buyback transactions

All contracts are:

- Open-source and audited by third-party security firms
- Upgradeable via proxy patterns (fixing bugs without disrupting ownership)
- Multi-signature controlled (requires 3 of 5 team members to approve critical changes)

User Experience Simplification:

Players never need to understand blockchain to enjoy Hyper Tek:

- **No Wallet Required Initially:** Standard email/password account creation; blockchain integration is invisible
- **Optional Wallet Connection:** Advanced users can link MetaMask or other Web3 wallets for full custody
- **Fiat Payment Methods:** Buy Hyper Bucks with credit cards, not cryptocurrency
- **Gas Fee Abstraction:** Platform covers all transaction fees on the users' behalf
- **One-Click Withdrawals:** Request NFA withdrawal to personal wallet with a simple button click

3.4 Security and Anti-Cheat Systems

Multi-Layered Protection

Hyper Tek implements comprehensive security measures protecting both players and the game economy:

Account Security:

-  **Two-Factor Authentication (2FA):** Required for marketplace trading and Hyper Buck withdrawals
-  **Email Verification:** Confirms account ownership
-  **Password Requirements:** Minimum complexity standards with regular rotation reminders
-  **Session Management:** Automatic logout after inactivity; unusual login location alerts
-  **Account Recovery:** Secure multi-step process for password resets

Anti-Cheat Technology:

Server-Side Validation: All critical game actions (combat results, resource generation, marketplace transactions) are calculated on servers, not client devices. Players cannot manipulate outcomes by modifying local game files.

Battle Eye Integration: Industry-standard anti-cheat software (used by Rainbow Six Siege, PUBG, Fortnite) detects:

- Memory injection and manipulation
- Aim bots and wall hacks (for Hyper Quest combat)
- Speed hacks and physics manipulation (for Hyper Racing)
- Bot accounts and automation scripts

Behavioural Analysis: Machine learning algorithms identify suspicious patterns:

- Impossible resource generation rates
- Unnatural trading patterns (money laundering attempts)
- Bot farming indicators (perfect timing, repetitive actions)
- Coordinated exploitation attempts

Economic Safeguards:

- Transaction velocity limits (can't transfer 100 NFAs in 5 minutes)
- Minimum account age requirements for high-value marketplace participation
- Review queues for transactions exceeding certain thresholds
- Circuit breakers that pause systems if detecting anomalous activity

DDoS Protection:

Cloudflare's enterprise infrastructure protects against Distributed Denial of Service (DDoS) attacks that aim to overwhelm servers. Automatic mitigation activates within seconds of detection, ensuring uptime even during targeted attacks.

Data Privacy and Compliance:

- GDPR compliance for European players
- COPPA compliance for players under 15
- Encrypted data transmission (TLS 1.3)
- Encrypted data storage (AES-256)
- Regular third-party security audits (at least annually)
- Bug bounty program rewarding security researchers

Player Reporting and Moderation:

- In-game reporting system for cheating, harassment, and exploitation
- Dedicated moderation team reviewing reports within 24 hours
- Escalating penalties: warnings → temporary suspensions → permanent bans
- Appeals process for disputed bans
- Transparency reports published quarterly (ban statistics, reasons, appeal outcomes)

04 Gameplay

4.1 Overlord Realm (MMORTS)

Welcome to Strategic Warfare

Overlord Realm is a massively multiplayer online real-time strategy game where you command one of seven alien civilisations, each stranded on a mysterious planet after a dimensional portal malfunction.

Choosing Your Civilization

At game start, select your species from seven unique races:

1. Avian Defenders: Bird-human hybrids with wings; bonuses to defence and aerial combat

2. Crystalline Architects: Crystallised-based beings; production and construction speed bonuses

3. Nomadic Engineers: Master mechanics; vehicle and ship upgrade bonuses

4. Celestial Scholars: Highly intelligent; research and technology bonuses

5. Volcanic Forgers: Born from fire; troop attack power bonuses

6. Aquatic Navigators: Ocean-dwellers; exploration and resource gathering bonuses

7. Ethereal Mystics: Energy beings; stealth and special ability bonuses

Each civilisation offers 5-8% statistical advantages in specific areas. Your choice affects visual aesthetics, bonus distributions, and strategic optimal play styles.

Your Spaceship: Command Center

Your crashed spaceship serves as your primary base with multiple upgradeable sections:

Essential Systems:

- **Main Hull:** Health points and defensive armour
- **Engines:** Movement speed and jump capabilities
- **Shields:** Main shield (prevents all attacks) and sectional shields (protect specific systems)
- **Weapons:** Short-range (usable in atmosphere) and heavy (space combat only)
- **Hydroponics:** Food production for troop capacity
- **Hospitals:** Heal wounded troops faster
- **Research University:** Unlock technology upgrades across 8+ categories

- **Manufacturing Bays:** Produce vehicle components and equipment
- **Teleportation System:** Transport troops to attack targets

Officer Management:

Appoint officers to key positions aboard your ship:

- **Captain:** Bonuses to overall attack/defense
- **Engineering Officer:** Hull and structural improvements
- **Weapons Officer:** Increased weapon damage and accuracy
- **Shield Officer:** Faster shield regeneration and strength
- **Science Officer:** Better research outcomes and material refinement
- **Mining Officer:** Enhanced resource collection rates

Officers level up through use, providing increasingly powerful bonuses.

Land Bases: Resource Empire

Upon reaching Level 5, you can establish land bases (maximum 3, expandable to 5 with rare Noble rewards):

Land Base Functions:

- **Mining Operations:** Extract minerals, alloys, and gems
- **Agricultural Zones:** Grow food for troop production
- **Refineries:** Convert crude oil into fuel
- **Gold Minting:** Produce gold currency (only source outside purchases)
- **Troop Training:** Build armies for attacks
- **Defensive Systems:** Walls, guns, shield generators

Land Quality Grades: When establishing a base, land quality (A through E grade) affects production rates, with Grade C being the baseline:

- Grade A: +40% production bonus
- Grade B: +25% production bonus
- Grade C: No bonus or penalty
- Grade D: -15% production
- Grade E: -25% production

Use Surveyor Probes (limited quantity) to scout for higher-grade land.

Troop Types and Combat:

Build three troop categories with 10 upgrade levels each:

Ground Troops: Hand-to-hand combat specialists (clubs → swords → laser blades)

- Strong vs. Ranged Troops
- Weak vs. Mounted Troops

Ranged Troops: Long-distance attackers (slings → bows → laser rifles)

- Strong vs. Mounted Troops
- Weak vs. Ground Troops

Mounted Troops: Riding indigenous creatures (basic riders → armoured cavalry)

- Strong vs. Ground Troops
- Weak vs. Ranged Troops

Space Fighters: Unlocked at Level 15; used only in space combat

- Attack other players in orbit
- Defend your ship when attacked
- Escort delivery missions in Hyper Quest

Each troop type has Attack, Defence, and HP (Health Points) statistics that improve with upgrades.

Technology Research:

The Research University allows studying 20-25 levels across categories:

- **Engine Technology:** Ship speed and fuel efficiency
- **Weapon Technology:** Damage output and accuracy
- **Armour Technology:** Defensive capabilities for ships and troops
- **Mining Technology:** Resource extraction rates
- **Medical Technology:** Troop healing speeds
- **Agricultural Technology:** Food production efficiency
- **Structural Engineering:** Building and upgrading speeds

Higher tech levels provide significant advantages; a maxed tech Level 15 player can compete with a higher-level but under-teched opponent.

Monster Hunting (PvE):

The planet hosts diverse monsters providing rewards when defeated:

Ground Monsters: Spiders, killer plants, dragons, lava creatures.

- Best attacked with Mounted Troops for bonus damage
- Drop materials, resources, and sometimes NFA equipment

Flying Monsters: Birds, bats, wasps

- Best attacked with Ranged Troops for bonus damage
- Higher risk but better rewards

Send an Officer to lead your troops for additional attack bonuses. Successful hunts provide:

- Experience points for your Overlord character
- Experience points for the leading Officer
- Resources (food, water, crystals, minerals, gems)
- Chance at rare item drops
- Event progress for daily/weekly challenges

Player vs. Player Combat:

Attack other players to raid resources, but only when their main shield is down:

Combat Sequence:

1. Send a Probe to gather intel (optional but recommended)
2. Select your attacking troops and optional Officer
3. Launch attack (your main shield deactivates)
4. Travel time based on distance and troop speed
5. Server calculates combat based on troops, tech, Officers, and ships
6. Receive battle report with replay option

Attacking Strategy:

- Probe first to understand the defender's strength
- Match your troop types against their weaknesses
- Bring Officers for 15-30% attack/defence bonuses
- Use portable Time Clocks (officer-carried) to speed arrival
- Coordinate with colony members for group attacks (teleporter system)

Defending Strategy:

- Keep the central shield active when not actively playing
- Upgrade sectional shields on weapons and key systems
- Train defensive troops continuously
- Request reinforcements from colony members
- Use countermeasures against incoming probes

Successful attacks steal exposed resources (not stored in protected reserves).

Colony System (Guilds):

Join or create colonies (max 40-80 members depending on colony level):

Colony Benefits:

- Shared defence of the colony base
- Group attack coordination
- Marketplace with lower commission rates
- Shared research bonuses
- Social features (chat, mail, voice)

Colony Base:

Each colony constructs a central base with buildings:

- **City Hall:** Unlocks additional member slots
- **Auction House:** Internal marketplace (15% commission vs. 20% elsewhere)
- **Trade Market:** Material exchanges between members
- **Research Centre:** Colony-wide bonus research

Members donate resources to upgrade these buildings, receiving colony points and rewards.

The Hammerong Invasion (*Bi-Weekly Event*):

Every two weeks, the mysterious Hammerong arrive to harvest planetary resources:

- 300-400 AI-controlled ships (Levels 18-30) land in the central Arena
- Arena shield drops, allowing player entry
- Hammerong attacks unshielded players and colony bases
- **Goal:** Destroy both Generator Cores within 48 hours
- **Success:** Hammerong retreats early; all players receive extraordinary rewards
- **Failure:** Hammerong complete harvest; planet-wide resource production temporarily reduced

This server-wide event encourages cooperation across rivalries.

4.2 Hyper Racing (Racing Simulator)

From Garage to Glory

Hyper Racing combines Gran Turismo's vehicle customisation depth with futuristic anti-gravity racing and Star Wars-style adrenaline.

Starting Your Racing Career

You begin with modest capital (earned from Overlord activities or an initial grant) and access to your garage, the lower deck of your Quest Runner spaceship.

Initial Purchase:

- Choose from 4-8 basic hover vehicles
- Buy a racing suit (helmet, jumpsuit, gloves, boots)
- Purchase initial fuel
- Pay entry fee (with resources) for your first race

The Racing Garage Interface:

Your garage displays:

- **Current Vehicle:** Rotating 3D model showing all upgrades
- **Workbenches:** Crafting and modification stations
- **Bookshelves:** Tech skills library
- **Team Offices:** Specialist workspaces
- **Parts Inventory:** All components and materials

- **Race Calendar:** Available competitions and events

Vehicle Customisation:

Upgrade vehicles across multiple systems:

Chassis: Foundation structure affecting weight and durability

Body Panels: Aerodynamic surfaces impacting drag and downforce

Power Plant: Engine type (chemical → nuclear → fusion → hyperdrive)

Lift Drives: Anti-gravity generators providing vertical thrust

Cooling System: Prevents overheating during extended races

Fuel Tank/Cells: Capacity determines race distance capability

CPU: Onboard computer managing systems

Air Brakes & Flaps: Directional control and speed management

Sensors & Gauges: Provide real-time performance feedback

Material Requirements:

Crafting upgraded components requires materials:

- **Crude Oil/Fuel:** Refined from raw resources
- **Crystals:** Power certain engine types
- **Energy Crystals:** High-performance systems
- **Alloys:** Created by blending minerals (3 grades, combined for higher tiers)
- **Composite Materials:** Lightweight, strong structures
- **Mesh Cloth & Resin:** Repairs and upgrades

Materials are earned through:

- Winning races
- Mining in Overlord Realm
- Completing Hyper Quest deliveries
- Purchasing packages
- Marketplace trading

Tech Skills Development:

Click your garage bookshelves to access the Tech Skills Library:

8 Skill Categories with 20-25 levels each:

- Engine Systems & Development
- Power Systems
- Fuel Types & Development
- Aerodynamics & Lift
- Composite Design & Development
- Body Types & Design
- Steering & Cornering
- Air Brake Systems

Learning Process:

1. Select skill level to learn
2. Pay cost (Hyper Bucks + Experience Points)
3. Wait for completion time (or use Time Clocks to accelerate)
4. Receive bonuses (vehicle performance improvements)

Completing skill columns unlocks:

- Higher top speeds
- Better vehicle setup percentages
- Faster production times
- Improved handling in weather conditions
- Reduced lap times through optimisation

Team Specialist System:

Acquire or hire specialists from the Pit Lane Marketplace:

Available Specialists:

- **Power Plant Mechanic:** Reduces engine install times, increases top speed
- **Fuel Specialist:** Lowers fuel costs and consumption, boosts power
- **Tuning Specialist:** Optimises engine management for acceleration
- **Structural Engineer:** Faster repairs, lighter weight, allows rare part installation
- **Team Manager:** Coordinates everyone for lower costs, faster events
- **Marketing Manager:** Reduces race entry fees, increases prize winnings
- **Systems Specialist:** Improves power integration, reduces energy costs
- **Aerospace Engineer:** Enhances handling, especially cornering
- **Machine Shop Specialist:** Modifies and repairs parts more efficiently

- **Aerodynamic Specialist:** Minimises drag, maximises straight-line speed
- **Composite Specialist:** Creates lighter, stronger materials
- **Pit Manager:** Decreases mandatory pit stop times

Specialist Progression:

- Hire at basic level
- Gain experience through races and events
- Level up for improved bonuses (5 tiers: 5th Class → 1st Class)
- Trade on the marketplace or auction off if no longer needed

Legendary Specialist NFAs provide maximum bonuses (rare, randomly acquired).

Racing Mechanics:

Race Entry:

1. Select race level appropriate to your vehicle class
2. Pay entry fee (recovered and more if you place top 3)
3. Choose camera angle preferences
4. Race begins when the lights turn green

During Race:

- Control vehicle through turns, straights, and elevation changes
- Manage fuel consumption
- Avoid collisions with obstacles, opponents, and environmental hazards
- Use boost zones and shortcuts strategically
- Execute pit stops if required (long races)

Race Circuits:

Tracks defy traditional racing logic:

- **Vertigo Badlands:** Racing through Grand Canyon-like formations with waterfalls
- **Neo-Tokyo Skyway:** Suspended above futuristic cities with moving obstacles
- **Crystal Caverns:** Underground caves with low visibility and narrow passages
- **Zero-G Asteroid Field:** Weightless sections requiring 3D maneuvering
- **Plasma Storm Track:** Weather hazards affecting handling
- **Shifting Sands Circuit:** Track layout changes mid-race via portal gates

Some tracks include "free-fall" sections, inducing the sensation of dropping (like roller coasters), heightening adrenaline, especially effective in VR mode.

Progression Path:

Amateur Leagues (Levels 1-10):

- Basic vehicles
- Forgiving tracks
- Learn mechanics
- Small prizes, but always profitable

Semi-Professional (Levels 11-20):

- Upgraded vehicles required
- More complex tracks
- Damage costs real money/materials to repair
- Larger prizes for top finishers

Professional (Levels 21-30):

- Elite vehicle specifications
- Extremely challenging circuits
- Team racing (join established teams, follow team orders)
- Massive prize pools
- Sponsorship bonuses

Off-World Racing:

Reaching certain levels unlocks the ability to transport your racing vehicles to other planets via Hyper Quest. Each of the 7 off-world planets features unique:

- Track designs reflecting planetary environments
- Exclusive materials as race rewards
- Different atmospheric conditions affecting vehicle performance
- Higher stakes competitions

Player vs. Player Racing:

Challenge specific players to:

- Direct head-to-head races
- Time trial comparisons
- Tournament brackets

Leaderboards track:

- Best lap times per circuit
- Overall race wins
- Tournament championships
- Career earnings

4.2 3 Hyper Quest (RPG Exploration)

Dangerous Opportunities Beyond Your World

Hyper Quest 100 unlocks after reaching Level 5 in Hyper Racing, transforming your garage/spaceship into a fully operational Quest Runner capable of interstellar travel.

The Quest Runner: Your Mobile Base

Your Quest Runner is simultaneously:

- **Racing garage** (Hyper Racing home page)
- **Exploration vessel** (travels between planets)
- **Combat ship** (defends against pirates, attacks monsters)
- **Mobile factory** (crafts components, refined materials)
- **Living quarters** (your character's personal space)

Upgrade Systems:

- **Engine progression** (chemical → nuclear → fusion → hyperdrive)
- **Weapon hardpoints** (short and heavy weapons)
- **Shield generators** (main and sectional)
- **Cargo capacity** (expandable storage)
- **Mining equipment** (deploys automatically when landed)
- **Hydroponics** (continuous food production)
- **Refinery** (processes raw materials)

Going Off-World: The Process

Step 1: Acquire Portal Ticket

Portal tickets cost significant Hyper Bucks and rare materials. Purchase from in-game stores or win through events.

Step 2: Check Request Board

Before departing, review delivery contracts:

- **Cargo:** What you're transporting
- **Destination:** Which planet
- **Payment:** Reward upon successful delivery
- **Insurance Cost:** Upfront payment (30% refunded if successful, on-time delivery)
- **MTR (Merciless Terrain Rating):** Attack probability percentage (15-70%)
- **Time Limit:** Delivery deadline

Example Request:

URGENT DELIVERY: Medical Supplies

From: Planet Aeloria (your current location)

To: Planet Ignisara

Payment: 75,000 Hyper Bucks

Insurance: 7,500 HB

MTR: 35% (Moderate Risk)

Time Limit: 48 hours

Reward: Double payment if delivered in under 24 hours

Accept multiple requests if your ship level allows (high-level players can carry 5+ simultaneous contracts).

Step 3: Harbour Space Port Departure

Travel to your planet's Harbour Space Port and initiate wormhole jump:

- Deducts portal ticket and materials (Furuseth Crystals)
- Teleports your Quest Runner to the "Drop Zone" near the destination planet
- You emerge in space, not on the surface

Step 4: Navigate the Dead Zone

The space between a planet's Drop Zone and its Outer Safety Zone is called the Dead Zone, a lawless territory where pirates hunt for valuable cargo.

Activities in the Dead Zone:

Asteroid Mining:

- Land on asteroids with mining equipment
- Extract rare materials unavailable on planets
- Risk: Slow movement makes you vulnerable to pirate attacks
- Reward: Essential components for advanced upgrades

Particle Filtration:

- Open filtration vents while flying slowly
- Collect microscopic debris from ancient asteroid impacts
- Risk: Extremely slow speed, easy pirate target
- Reward: Large quantities of specific refined materials

Space Creature Hunting:

- Encountering alien life forms thriving in a space vacuum
- Combat for materials, experience, and spatial drops
- Risk: Creatures can damage your ship
- Reward: Unique components and crafting ingredients

Salvage Operations:

- Discover abandoned vessels
- Scan cargo contents
- Use tractor beam to retrieve valuables
- **Risk:** Pirates may ambush during salvage
- **Reward:** High-value equipment, sometimes Legendary NFAs

Pirate Encounters:

Based on the MTR rating, you may be attacked by other players acting as pirates:

If Attacked:

- Your Quest Runner's defences activate automatically
- Choose to fight or flee
- Fighting: Deploy fighters, use ship weapons, hope your combat power exceeds attackers
- Fleeing: Max speed through asteroid fields (risk collision damage) or activate Safe Passage Token (if you have one)

If Defeated:

- Lose all cargo (failed delivery contracts)
- Insurance payment forfeited
- Possible capture of team specialists (ransomed back)
- Ship returns to home world, but reputation suffers

If Victorious:

- Retain cargo and continue to destination
- Loot defeated pirates' resources
- Earn "pirate hunter" reputation bonuses

New Player Protection:

Players under Level 12 and without specific milestones cannot be attacked by veterans. This grace period allows learning mechanics without excessive risk.

Step 5: Planetary Arrival

Enter the Outer Safety Zone and request landing clearance:

- Pay docking fees
- Access planet's Harbour facilities
- Complete delivery contracts (transfer cargo, receive payment)
- Access local racing circuits (Hyper Racing)
- Visit Colony marketplaces (Overlord Realm)

The Seven Off-World Planets:

Each planet offers unique characteristics:

- 1. Ignisara (Volcanic World):** High-temperature racing circuits, fire-resistant materials, and aggressive native creatures
- 2. Aquatica (Ocean World):** Underwater tracks, coral-based resources, aquatic monster hunting
- 3. Crystallia (Gem World):** Prismatic environments, rare crystal mining, optical technology research
- 4. Mechanos (Industrial World):** Urban racing, advanced alloys, manufacturing specialists
- 5. Verdantia (Forest World):** Natural landscapes, organic materials, botanical research
- 6. Glacialis (Ice World):** Frozen circuits, cryogenic technology, extreme weather challenges
- 7. Nebulosa (Cloud World):** Floating platforms, atmospheric racing, anti-gravity innovations

Economic Opportunities:

Hyper Quest enables sophisticated trading strategies:

- Buy materials cheaply on one planet, sell high on another
- Complete delivery chains for compounding rewards
- Establish trade routes with predictable profit margins
- Discover arbitrage opportunities in cross-planetary markets

Some players specialise entirely in Quest mode, building courier empires.

The Virtual Business Within the Game:

Land Ownership: Purchase virtual land plots on planets using Hyper Bucks

Business Establishment: Build:

- Shops selling crafted goods
- Warehouses storing materials
- Processing facilities refining resources
- Service providers (repair stations, fueling stations)

Hiring Players: Employ other players:

- Pay wages in Hyper Bucks
- Delegate resource collection
- Outsource crafting to specialists
- Build economic networks

Real-World Integration:

Link actual businesses to virtual storefronts:

- **Example:** Own a real pizza shop? Create a virtual franchise in-game
- Run local advertising targeting nearby players
- Accept orders through the Hyper Tek marketplace
- Pay platform commission on sales
- Bridge digital and physical commerce

4.4 Cross-Game Progression Mechanics

The Seamless Integration

Hyper Tek's most revolutionary feature: your progress compounds across all three games.

Shared Player Profile:

Your account maintains unified stats:

- **Character Level:** Overall progress (max Level 50+)
- **Experience Points (EXP):** Earned across all activities
- **Hyper Bucks Balance:** Spendable everywhere
- **Resource Inventory:** Materials accessible in all modes
- **Team Specialists:** Provide bonuses across all three games
- **NFAs:** Equip able/usable in relevant contexts

Example Integration:

Scenario: You own a Legendary Fuel Specialist NFA

- **Overlord Realm:** +30% fuel efficiency for your spaceship's engines; lowers jump costs
- **Hyper Racing:** +25% fuel tank capacity; reduces pit stop frequency
- **Hyper Quest:** +20% thruster efficiency when escaping pirates; extends travel range

Same specialist, three different but related benefits.

Resource Flow Diagram:

Overlord Realm: Mine rare minerals

↓

Hyper Quest: Refine minerals into advanced alloys

↓

Hyper Racing: Craft lightweight body panels using alloys

↓

All Games: Improved performance across combat, exploration, and racing

Quest Runner as Universal Hub:

Your Quest Runner physically appears in each game mode:

- **Overlord:** Spaceship on planetary surface, upgradeable systems
- **Racing:** Garage lower deck, vehicle storage, and modification

- **Quest:** Exploration vessel, travels between worlds

Upgrades to hull, engines, shields, and weapons benefit you everywhere.

Progression Synergies:

Tech Research (*Overlord*) → Unlocks better crafting recipes (*Racing*) → Enables advanced equipment (*Quest*)

Racing Prize Money → Funds land base expansion (*Overlord*) → Increases resource production → Fuels more racing upgrades

Dangerous Deliveries (*Quest*) → Earn rare materials → Upgrade troops (*Overlord*) + Upgrade vehicles (*Racing*)

Time Optimisation:

Efficient players develop rhythms:

- **Monday-Wednesday:** Focus on Overlord (establish economic foundation)
- **Thursday-Friday:** Racing competitions (convert resources to Hyper Bucks)
- **Weekend:** Hyper Quest exploration (high-risk, high-reward activities)
- **2nd Weekend:** Hammerong invasion/SvS

But there's no "correct" path—play what you enjoy, and progress naturally flows.

4.5 Quest Runner: Your Persistent Home Base

More Than Transportation

The Quest Runner represents Hyper Tek's technical achievement: a single asset serving multiple functions across three distinct game experiences.

Layered Design:

Exterior:

- 3D modelled spaceship with customisable paint schemes
- Visible damage states reflecting combat history
- Animated engine effects, weapons, and shield visuals
- Seven civilisation-specific designs

Interior Views:

Overlord Mode:

- **Bridge:** Command center with holographic displays
- **Engineering:** Engine and power system controls
- **Medical Bay:** Troop healing facilities
- **Research Labs:** Technology development
- **Barracks:** Troop training and storage
- **Cargo Hold:** Resource management

Racing Mode:

- **Garage:** Vehicle display with rotating platforms
- **Workshop:** Crafting benches and modification tools
- **Team Offices:** Specialist workstations
- **Parts Storage:** Inventory management
- **Tech Library:** Skill training bookshelves

Quest Mode:

- **Cockpit:** First-person piloting view
- **Navigation:** Star maps and route planning
- **Cargo Bay:** Contract deliveries and mining storage
- **Weapons Control:** Combat systems management
- **Teleportation Room:** Troop launching system
- **Living Quarters:** Personal space customisation

Upgrade Persistence:

Every enhancement applies universally:

- **Hull Armor +20%:** Better defences in Overlord combat AND racing collision protection AND Quest pirate resistance
- **Engine Speed +15%:** Faster planetary movement (Overlord) AND reduced travel time (Quest) AND improved racing acceleration
- **Shield Generator Level 8:** Protects against attacks (Overlord) AND racing hazards AND pirate ambushes (Quest)

Personalisation:

Cosmetic Customisation:

- Colour schemes and decals
- Interior furniture arrangements
- Decorative items (won through events, purchased, or traded)
- Style themes: Steampunk, Cyberpunk, Modern, Medieval, Art Deco

Functional Customisation:

- Weapon loadouts (different combinations for different strategies)
- Team specialist assignments (optimise for current focus)
- Resource allocation (prioritise which production systems run)

Living Quarters Design:

Your character's private room within the Quest Runner:

- **Furniture:** Beds, desks, chairs, shelves (won in events, marketplace purchases)
- **Decorations:** Artwork, plants, rugs, lamps, screens
- **Completion Bonuses:** Finish themed room sets for rewards (e.g., complete Steampunk collection for +5% production bonus)

This gamifies personalisation, encouraging collection and trading.

The Ship as Identity:

Over time, your Quest Runner tells your story:

- Battle scars from fierce Overlord wars
- Racing championship decals from tournament victories
- Rare modifications from dangerous Quest expeditions
- Legendary team specialists visible in office windows

Other players see your ship and immediately recognize experience level and achievements.

05 Non-Fungible Assets Range

5.1 What are the NFA Range and how do they work?

True Ownership with Guaranteed Value

All our Non-Fungible Digital Assets represent Hyper Tek's solution to blockchain gaming's fundamental problem:

Worthless NFTs.

Unlike traditional NFTs that can collapse to zero value, every Hyper Tek's NFA range carries a **platform-guaranteed minimum buyback price**.

Range Definition:

A Non-Fungible Assets (NFA), Non-Fungible Collectibles (NFC), Non-Fungible Tokens (NFT) are a range of unique digital asset that:

- Exists as a blockchain-verified token (ERC-721 standard on eth)
- Represents a specific in-game item (team specialist, vehicle, weapon, equipment)
- Provides measurable gameplay advantages (statistical bonuses)
- Has a published reserve value (minimum buyback guarantee)
- Can be traded freely on the marketplace
- Never disappears or becomes inaccessible

Types of NFAs:

Extremely Rare Team Specialists:

- Fuel Engineers providing +55% fuel efficiency

- Combat Officers providing +60% troop attack power
- Marketing Managers reducing entry fees by 50%
- Structural Engineers allowing installation of otherwise prohibited parts

Rare Vehicles and Equipment:

- Custom racing vehicles with unique stats
- Advanced weapon systems for Overlord combat
- Specialised mining equipment for Quest exploration
- Cosmetic items with embedded bonuses

Unique Artifacts:

- Magical Horn of Valor (one-time use defensive summoning)
- Golden Goose (produces 1M gold daily automatically)
- Sapphire of Invisibility (makes the ship invisible to specific enemy types for 15min/hour)
- Magical Lamp of Duplication (doubles the effects of other high-value items for a limited time)

High-Value Land and Buildings:

- Premium-grade land bases (Grade A only)
- Pre-built Colony structures with bonuses
- Exclusive racing circuits (private hosting rights)

Asset Classification

Three token types divide financial backing from gameplay power, which keeps rarity and pay-to-win risk separate.

Type	Who creates it	What it does
NFA — Non-Fungible Asset	Hyper Tek 100 only	Core gameplay power and stats. Carries the strongest in-game bonuses
NFC — Non-Fungible Collectable	Hyper Tek 100, or a licensed user creator	Passive modifiers, series-based bonuses. User-created NFCs are reviewed before listing, since they appear inside the game
NFT — Non-Fungible Token	Anyone	Cosmetic and collectable. No direct combat stats, though it can add bonuses in specific parts of the game

Every NFA, NFC, and NFT carries the Guaranteed Minimum Buy-Back.

5.2 The Guaranteed Value Floor System

How Traditional NFTs Fail:

Most blockchain games create NFTs without intrinsic value:

- No gameplay utility (purely speculative)
- No market-making (only player-to-player sales)
- No value floor (can drop to zero)
- Result: 95% of NFTs become worthless

Hyper Tek's Innovation:

Every NFA has **three sources of value**:

1. **Utility Value**: In-game bonuses and advantages
2. **Market Value**: What other players will pay
3. **Reserve Value**: Platform-guaranteed buyback minimum

Reserve Value Calculation:

When an NFA is minted, the platform sets a reserve value based on:

Rarity Tier: Common → Uncommon → Rare → Semi-Rare → Extremely Rare

- Prevents arbitrage exploitation
- Covers platform transaction costs
- Incentives for player-to-player sales (better prices)
- Covers royalty paid to the artist
- Ensures reserve fund sustainability

Commission and Rewards

The resale of an item splits 86% to the seller, 5% into the GMBB Fund, 2% to the original artist, and 7% to Hyper Tek 100. A first-time sale by a user splits 92% minus their chosen GMBB percentage to the seller, with the GMBB share going to the fund and 8% to Hyper Tek 100.

Sellers who accept a smaller cut can offer buyers a discount through the quest system, and periodic resale rewards give both buyers and sellers a lower commission in exchange for a larger GMBB contribution. Both mechanisms are opt-in and cost Hyper Tek 100 nothing to offer

HyperBucks

HyperBucks is an off-chain (for now) in-game currency, fixed at 250 HB per USD. It can be topped up with card or crypto, spent in-game, or cashed back out to a bank or to USDC. Because it never touches the blockchain and the rate never moves, it is treated as a currency conversion rather than a sale.

Renting, and Assets Brought In From Elsewhere

Owners can rent out an item's in-game utility without the item ever leaving their wallet, through an off-chain lease system. The item stays fully theirs; the renter receives the in-game benefit for the agreed period, and the owner earns passive income.

Items minted elsewhere can be brought onto Hyper Tek 100 and are treated as a first listing here, complete with their own GMBB Fund from that point forward. Hyper Tek 100 items can equally be listed on other marketplaces. The GMBB Fund only grows when an item sells through Hyper Tek 100, but it is never reduced or restricted by trading elsewhere.

Verification and Compliance

Identity verification happens once, the first time a user commits to an action that requires it: placing a bid, listing an item, buying a package, or claiming an in-game reward. Signing up, browsing, and playing the early parts of the game require nothing. One verification then covers every part of the platform.

The platform is built to record the buyer's country and the applicable tax treatment on every transaction from the first sale onward, so it is ready for reporting obligations as they come into effect without needing to reconstruct history later.

Regulatory position. Hyper Tek 100 does not require a MiCA licence, on the basis that it is an open platform and does not exercise control over user funds: the GMBB Fund cannot be redirected by Hyper Tek 100, and the early-withdrawal option always pays the item's own owner into their own wallet, never to a destination the platform selects.

Why This Works:

Traditional NFTs lack fundamental value. Hyper Tek NFAs have:

- **Utility:** They make you stronger in gameplay
- **Scarcity:** Limited supply via controlled drops
- **Liquidity:** Time-Bound Tiered Vesting & Payout Logic. The platform always buys back at 80% of the reserve amount on day one to a high of 97% in year 5.
- **Growth Potential:** Reserves appreciate with game success

5.3 Rarity Tiers and Classifications

Five-Tier System:

Common (White):

- Drop rate: ~5%
- Reserve value: \$50
- **Bonuses:** +10-15% in specific stats
- **Example:** Basic Team Specialist providing a small production boost

Uncommon (Green):

- Drop rate: ~2%
- Reserve value: \$100
- **Bonuses:** +15-20% in specific stats
- **Example:** Mid-tier Racing Mechanic reducing repair times

Semi-Rare (Blue):

- Drop rate: ~0.5%
- Reserve value: \$400
- **Bonuses:** +15-25% in specific stats
- **Example:** Advanced Fuel Engineer with dual bonuses

Rare (Purple):

- Drop rate: ~.005%
- Reserve value: \$600
- Bonuses: +25-45% in specific stats, sometimes multiple categories
- **Example:** Elite Combat Officer with attack AND defence bonuses

Extremely Rare (Gold):

- Drop rate: ~0.0001%
- Reserve value: \$1000+
- **Bonuses:** +35-65%+ in stats, unique abilities, multiple categories
- **Example:** Master Aerodynamic Specialist affecting speed, handling, and fuel efficiency simultaneously

Visual Identification:

In-game, NFAs display:

- Border colour matching rarity tier
- Animated Glow Effects
- Stat comparison vs. common equivalents
- Ownership history (previous owners if traded)
- Blockchain verification badge

Acquisition Methods:

NFAs **cannot be directly purchased**.
(Unless special promotion). They're obtained only through:

1. Gameplay Rewards (*Skill-based*):

- Top 3 tournament finishes
- Exceptional quest completions
- Monster hunting milestones
- Achievement unlocks

2. Loot Packages (*Randomised*):

- Purchase packages with Hyper Bucks or USD
- Each package has published odds drop rate
- Guaranteed minimum value per package
- Complies with loot box regulations (odds transparency)

3. Special Events (*Limited time*):

- Seasonal competitions
- Community milestones
- Charity events (proceeds to Gaming for Good)
- Server-first achievements

4. Marketplace Trading (*Player-to-player*):

- Buy NFAs listed by other players
- Bid in auction format
- Negotiate direct trades
- Prices set by the free market above the reserve floor

This randomised acquisition prevents pay-to-win while allowing economic participation.

5.5 How NFA Ranges Differ from Traditional NFTs

Side-by-Side Comparison:

Feature	Traditional NFTs	Hyper Tek NFA Ranges
Value Floor	None (can drop to \$0)	Guaranteed 80% reserve buyback up to 97%
Utility	Often purely speculative	Tangible in-game bonuses
Liquidity	Dependent on finding buyers	Always liquid via platform buyback
Acquisition	Usually, direct purchase	Earned through gameplay or random packages
Value Trajectory	Typically depreciates 90%+	Designed to appreciate with game growth
Regulatory Risk	High (potential securities classification)	Lower (clearly utility-focused)
Environmental Impact	Varies (Ethereum = high)	Minimal (Polygon Layer-2)
Transaction Fees	\$10-100+ (Ethereum gas)	\$0 (platform covers fees)

The Philosophical Difference:

Traditional NFTs: "Buy this digital image and hope someone pays more later"

Hyper Tek NFA/NFC/NFTs: "Earn this powerful item that makes you better at the game, and if your NFA item fails at auction to reach the minimum reserve, you get paid out instantly."

The shift from speculation to utility fundamentally changes the value proposition.

Regulatory Positioning:

Hyper Tek NFAs are designed to avoid securities classification:

- **Primarily Functional:** Value derives from gameplay utility, not investment expectation
- **Not Marketed as Investments:** All communications emphasise entertainment and gameplay
- **Platform Buyback:** Creates liquidity without creating secondary speculation markets
- **Random Acquisition:** Can't be purchased directly; must be earned or won
- **No Profit Promises:** No claims about appreciation or returns

Legal counsel has reviewed the structure for compliance in major markets (US, EU, Asia-Pacific).

06 Digital and Physical Assets/Collectables

6.1 Digital vs Physical Assets/Collectables

What is the Difference Between Digital and Physical Assets

NFAs/NFTs are non-fungible Assets/ Tokens, digital artwork protected or listed on a blockchain ledger. As well as digital artwork, they are usable assets within the Hyper Tek Gaming Ecosystem, that players receive bonuses in the game when they acquire

What is the Difference Between Digital and Physical Assets

- NFA/NFT baseball-style collectible card
- Land Title Certificate of Ownership
- Business Title Certificate of Ownership

6. Hyper Bucks: Our In-Game Currency System

6.1 Currency Overview and Exchange Rates

What Are Hyper Bucks?

Hyper Bucks (HB) are Hyper Tek's primary in-game currency, used for:

- Purchasing items, materials, and services
- Paying entry fees and insurance costs
- Bidding in marketplace auctions
- Speeding up timers and production
- Converting to real-world USD

Exchange Rate:

\$1 USD = 250 Hyper Bucks

This rate is fixed and guaranteed for conversions in both directions (subject to minimum thresholds and processing fees).

Example:

- Player purchases \$20 USD → Receives 5,000 HB instantly
- Player accumulates 25,000 HB → Can withdraw \$100 USD (minus ~5% processing fee = \$95 net)

Why Virtual Currency?

Hyper Bucks serve multiple purposes:

- **Psychological:** Easier to spend 1,000 HB than visualise \$4
- **Economic Control:** Platform can adjust in-game prices without changing real prices
- **Regulatory:** Separates entertainment currency from direct gambling
- **Multi-Currency:** Allows smaller transactions without \$0.01 real-money limitations

Display in Game:

Your HB balance appears on every screen:

- Top-right corner of the interface
- Current balance in multiple denominations (1,234,567 HB = 1.23M HB)
- Real-time updates after purchases/sales
- Transaction history with timestamps

6.2 Earning Hyper Bucks Through Gameplay

Income Streams:

Racing Winnings:

- 1st Place: 15,000 - 75,000 HB (depending on race tier)
- 2nd Place: 10,000 - 50,000 HB
- 3rd Place: 7,500 - 35,000 HB
- Participation: 2,500 - 10,000 HB

Tournament Prizes:

- Amateur Tournaments: 50,000 - 200,000 HB
- Professional Tournaments: 500,000 - 2,000,000 HB
- Championship Events: 5,000,000+ HB

Overlord Realm Activities:

- **Monster Hunting:** 1,000 - 50,000 HB per kill (based on monster power level)
- **Resource Sales:** Convert materials to HB via marketplace
- **Successful Attacks:** Raid 10,000 - 500,000+ HB from defeated players
- **Colony Events:** Shared rewards distributed to members

Hyper Quest Deliveries:

- Low-Risk Contracts: 20,000 - 60,000 HB
- Moderate-Risk: 60,000 - 150,000 HB
- High-Risk: 150,000 - 500,000+ HB
- Speed Bonuses: Double payment if delivered under aggressive timelines

Daily/Weekly Events:

- **Daily Login:** 500 - 2,000 HB
- **Daily Missions:** 5,000 - 15,000 HB
- **Weekly Challenges:** 25,000 - 100,000 HB
- **Milestone Achievements:** 10,000 - 250,000 HB

Marketplace Sales:

- Sell items, materials, and team specialists
- Set your own prices (above reserve values for NFAs)
- Platform takes 0.5 - 14% commission
- Receive HB immediately upon sale

Economic Opportunity:

Dedicated players can earn \$200-500 USD monthly (50,000 - 125,000 HB) through:

- Consistent tournament participation
- Running courier businesses in Hyper Quest
- Crafting/trading operations
- Efficient resource mining and sales

Top-tier players (esports level, virtual business owners) earn \$1,000-5,000+ monthly.

6.3 Purchasing and Converting Hyper Bucks

Buying Hyper Bucks:

Payment Methods:

- Credit/Debit Cards (Visa, Mastercard, Amex)
- PayPal
- Apple Pay / Google Pay
- Bank Transfers (for large amounts)
- Cryptocurrency (BTC, ETH, USDC) via BitPay

Purchase Packages:

\$1USD will equal \$250 Hyper Bucks', or in-game currency. Buying packages will include some amount of Hyper Bucks and the advertised rewards.

Converting HB to USD:

Withdrawal Process:

1. Navigate to Account Settings → Withdrawal
2. Enter HB amount to convert (minimum: 25,000 HB = \$100)
3. Select payout method (PayPal, Bank Transfer, Check)
4. Confirm identity (2FA required)
5. Processing time: 3-7 business days

Fees:

- **Platform fee:** 5% (covers payment processing, compliance)
- **Example:** Withdraw 50,000 HB (\$200) → Receive \$190 net

Limits:

- Minimum withdrawal: \$10 USD
- Maximum per month: \$10,000 USD (anti-money laundering)
- Higher limits available for verified accounts

Tax Implications:

Players are responsible for reporting earnings:

- Hyper Tek provides annual statements (Form 1099-MISC equivalent)
- Earnings may be taxable as income or gambling winnings (jurisdiction-dependent)
- Consult tax professionals for guidance

Platform complies with:

- KYC (Know Your Customer) regulations
- AML (Anti-Money Laundering) monitoring
- Reporting thresholds per country requirements

6.4 Additional Currency Types

Gold:

Specialty currency produced exclusively in **Land Bases** (Overlord Realm) or won in special events.

Uses:

- Premium marketplace transactions
- High-value NFA auctions
- Exclusive cosmetic items

- Fast-tracking research/construction (alternative to Time Clocks)

Earning Gold:

- Land-based gold minting (requires Level 8+ land base)
- Monster hunting (rare drops)
- Tournament grand prizes
- Charity event participation rewards

Exchange Rate: Gold cannot be directly purchased with USD or converted to HB. It must be earned, preserving its special status.

Diamonds:

Ultra-rare currency for exceptional items.

Uses:

- Legendary NFA acquisitions (marketplace)
- Unlock special game modes/features
- Premium customisations (unique ship designs)
- Emergency resource packages

Earning Diamonds:

- Completing epic quests
- Server-first achievements
- Top 10 global rankings (monthly)
- Special promotional events

Exchange: Diamonds can sometimes be traded for massive quantities of HB (e.g., 1 Diamond = 100,000 HB) but cannot be purchased directly.

Crystals (Furuseth, Energy, Time):

Furuseth Crystals:

- Enable wormhole jumps between planets
- Power teleportation systems
- Rare and valuable

Energy Crystals:

- Fuel advanced weapon systems
- Power high-performance racing engines
- Run shield generators

Time Crystals (Time Clocks):

- Speed up research, construction, travel, production
- Purchasable with HB or earned through gameplay
- Essential for competitive play

All crystal types can be:

- Mined in specific locations
- Dropped from monster hunting
- Purchased in packages
- Traded on marketplaces

6.5 Economic Balance and Inflation Controls

The Challenge:

In-game economies often suffer from:

- **Hyperinflation:** Too much currency chasing too few goods
- **Deflation:** Not enough currency circulation
- **Wealth Concentration:** Top 1% hoarding all resources

Hyper Tek's Controls:

Sinks (Currency Removal):

- Entry fees for races and events
- Repair costs after battles
- Insurance payments for contracts
- Marketplace commissions (15-20%)
- Land base construction costs
- Research and technology expenses
- Fuel consumption and resource usage

Taps (Currency Creation):

- Race winnings
- Event rewards
- Monster hunting drops
- Daily login bonuses
- Achievement completions

Balance Target: Platform aims for 1.2:1 ratio (slightly more sinks than taps), ensuring gradual currency removal and maintained value.

Monthly Economic Reports:

Published data includes:

- Total HB in circulation
- New HB generated (taps)
- HB removed (sinks)
- Sink/Tap ratio
- Average player balance
- Wealth distribution (Gini coefficient)
- Marketplace transaction volume

Dynamic Adjustments:

If inflation is detected:

- Increase sink costs (higher entry fees)

- Reduce tap rewards (lower race prizes)
- Introduce new expensive content (rare upgrades)
- Marketplace tax increases

If deflation is detected:

- Decrease sink costs
- Increase tap rewards
- Special promotional events (bonus HB weekends)
- Temporary commission reductions

Circuit Breakers:

Automatic triggers prevent economic catastrophe:

- If HB inflation exceeds 20% monthly → Suspend new HB creation, only allows sinks
- If marketplace volume drops 50%+ → Reduce commissions, boost incentives
- If wealth concentration exceeds 80% (top 5% control) → Redistribute through targeted events

Expert Economic Team:

Hyper Tek employs professional game economists (backgrounds from EVE Online, World of Warcraft, and economics PhDs), monitoring daily metrics and making surgical adjustments.

Player Impact:

A stable economy means:

- Your earned HB retains purchasing power
- NFAs maintain consistent relative values
- New players aren't priced out by runaway inflation
- Time invested today has a predictable value tomorrow

07 Rewards and Progression

7.1 Experience Points and Levelling Systems

Three Interconnected Progression Tracks:

Character Level (*Your Overlord*):

Maximum Level: 50+

Benefits per level:

- Unlock new features and game modes
- Access higher-tier races and tournaments
- Qualify for dangerous Hyper Quest zones
- Expand team specialist capacity
- Improve base stats (slightly)

Experience Sources:

- Completing missions and quests
- Winning races and battles
- Defeating monsters
- Achieving milestones
- Participating in events

Team Specialist Levels:

Each specialist progresses independently:

Tier Progression: Recruit → 5th Class → 4th Class → 3rd Class → 2nd Class → 1st Class

Benefits per tier:

- Increased bonus percentages
- Additional secondary bonuses
- Reduced costs/times for their specialisation
- Unlocked unique abilities

Experience Sources:

- Using them in their designated role
- Completing relevant activities (e.g., Fuel Specialist gains XP from races)
- Training sessions (costs HB but provides XP)

Technology Levels (*Research*):

8+ Categories with 20-25 levels each = 160-200+ total tech levels

Benefits:

- Unlock advanced equipment
- Improve production efficiency
- Enhance combat effectiveness
- Reduce costs and times
- Access exclusive features

Experience: Tech levels don't use XP; instead, require:

- Time investment (hours to days per level)
- Resource costs (materials + HB)
- Prerequisite completion (lower levels first)

Levelling Speed:

- **Casual Players** (5-10 hours/week):
Reach Level 20 in 3-4 months
- **Regular Players** (15-20 hours/week):
Reach Level 20 in 2-3 months
- **Hardcore Players** (30+ hours/week):
Reach Level 20 in 1-2 months

7.2 Daily and Weekly Events

Daily Missions (Reset at midnight local time):

Daily Login Bonus:

- **Day 1:** 500 HB + Small resource package
- **Day 2:** 750 HB + Materials
- **Day 3:** 1,000 HB + Time Clocks
- **Day 7:** 5,000 HB + Rare item package + Reset counter

Daily Challenges:

- **Complete 3 Races:** 2,500 HB
- **Defeat 10 Monsters:** 3,000 HB + Materials
- **Mine 50,000 Resources:** 2,000 HB
- **Win 1 PvP Battle:** 5,000 HB + Gems
- **Craft 5 Items:** 1,500 HB + Crystals

Daily "Big Wheel" Spin:

- Free spin once per day (additional spins purchasable)
- **Prizes:** HB, materials, Time Clocks, rare items, occasionally Legendary NFAs

Weekly Events:

Monday: Monster Hunting Madness

- 2x rewards from monster kills
- Special mega-monsters spawn with exceptional loot
- Leaderboard: Top 20 hunters win bonus prizes

Tuesday: Racing Championship

- Featured race circuit with elevated prizes
- Fastest lap times win special cosmetics
- Participation rewards for all entrants

Wednesday: Marketplace Discount Day

- Special featured auctions
- Bonus HB for sellers

Thursday: Tech Research Boost

- -50% time required for all research
- Bonus XP for completing tech levels
- Free Time Clock grants

Friday: Hyper Quest Bonanza

- Double rewards for delivery contracts
- Reduced MTR (safer pirate zones)
- Rare material spawn rates increased

Saturday-Sunday: Weekend Warfare

- Colony vs. Colony tournaments
- Server-wide objectives (defeat 100,000 monsters collectively)
- Epic prizes distributed to all participants

Monthly Mega-Events:

First Weekend: Championship

Tournaments

- All three game modes host major competitions
- Qualifiers throughout the month
- Top 100 players in each mode win substantial prizes
- Grand champions receive Legendary NFAs + HB + Titles

Mid-Month: Charity Events

- R U OK? Mental Health Awareness (\$2-10 badges supporting mental health)
- Pink Ribbon Breast Cancer (\$2-10 ribbons supporting research)
- Players display badges/ribbons on vehicles/ships for rewards
- 100% proceeds donated to respective charities
- Hyper Tek matches donations up to \$5,000

End-of-Month: Community Milestones

- Collective goals (e.g., "All players combined defeat 5 million monsters")
- If achieved: Everyone receives bonus packages
- Encourages cooperation across a competitive environment

7.3 Tournament and Competition Rewards

Racing Tournaments:

Amateur Leagues (Levels 1-15):

- **Entry:** 5,000 HB
- **1st Place:** 75,000 HB + Semi-Rare vehicle part
- **2nd Place:** 50,000 HB + Uncommon specialist
- **3rd Place:** 35,000 HB + Materials
- **Top 10:** 15,000 HB participation bonus

Professional Leagues (Levels 16-30):

- **Entry:** 25,000 HB
- **1st Place:** 500,000 HB + Rare NFA + Championship decal
- **2nd-3rd:** 250,000 - 350,000 HB + Rare items
- **Top 10:** 100,000 HB + Uncommon items

Championship Series (Level 30+, invitation only):

- **Entry:** Qualification required (no fee)
- **1st Place:** 5,000,000 HB + Extremely Rare NFA + Permanent title + Trophy display
- **2nd-5th:** 1,000,000 - 2,500,000 HB + Rare NFAs
- **Top 20:** 250,000+ HB + Recognition

Overlord Realm Tournaments:

Colony Wars (Colony vs. Colony):

- Bracket-style elimination
- Winning colony members receive:
 - 100,000 - 500,000 HB per member
 - Rare resources distributed
 - Colony base upgrades funded by platform
 - Exclusive colony banner/emblem

Individual PvP Ladders:

- Season-long rankings (3 months)
- Based on successful attacks, defenses, resource raids
- Top 100 globally: Tiered rewards (Extremely Rare → Rare → Semi-Rare NFAs)
- Top 10 per region: Additional bonuses

Hyper Quest Challenges:

Courier Championships:

- Who completes the most high-risk deliveries in 1 month?
- Leaderboard with tier brackets (by player level)
- Top performers: 250,000 - 1,000,000 HB + Rare ship components

Exploration Contests:

- Discover hidden locations on planets
- Mine the rarest asteroids
- Defeat space creatures
- Varied monthly themes with specific targets

Cross-Game Championships (*Annual Event*):

The Overlord Grand Prix:

- Combines activities across all three games
- Points for racing wins, Overlord victories, Quest completions
- Overall champion across all modes
- Grand prize: 10,000,000 HB + Multiple Legendary NFAs + Real-world prize (\$5,000 USD equivalent) + Permanent in-game monument

7.4 Team Specialist Acquisition

Obtaining Specialists:

Pit Lane Marketplace (*Hyper Racing, accessible from all modes*):

- Browse available specialists by category
- View stats, bonuses, and current levels
- Purchase with HB (prices set by player sellers)
- Bid in auctions for rare/legendary specialists

Random Drops:

- Monster hunting (5-15% chance per kill, rarity-dependent)
- Event participation rewards
- Loot packages (purchased or earned)
- Quest completion bonuses

Mission Rewards (**Free-to-Play Path**):

- Complete specific chains (e.g., "Win 50 races" → Fuel Specialist)
- Achievement milestones grant specialists
- Tutorial completion provides starting specialists

Special Events:

- Weekly rotations featuring discounted specialists
- Holiday promotions with exclusive versions
- Community milestones unlocking free specialists for all

Specialist Management:

Hiring:

- Assign to the relevant department in your Quest Runner
- One specialist per role at a time
- Can replace anytime (previous specialist returns to inventory or marketplace)

Leveling:

- Automatically gains XP when you perform related activities
- Level up unlocks improved bonuses
- Max level: 1st Class (5 tiers total)

Trading:

- Selling specialists, you don't need
- Trade with other players directly
- Auction rare/legendary specialists for high prices

Strategic Optimisation:

Specialists can be swapped based on the current focus:

- Racing this week? → Equip Fuel Specialist, Aerodynamic Specialist, Pit Manager
- Going to war in Overlord? → Equip Combat Officers, Structural Engineer, Weapons Officer
- Exploring in Hyper Quest? → Equip Navigation Officer, Shield Specialist, Mining Officer

This strategic layer rewards thoughtful planning.

7.5 Land Base Ownership

What Are Land Bases? (Overlord Realm feature)

Land bases are resource-generating facilities established on planetary surfaces, separate from your spaceship.

Benefits:

- Automated Production: Continuously generate resources even when offline
- Gold Minting: Only source of gold currency in-game (besides events)
- Troop Training: Additional armies beyond spaceship capacity
- Strategic Value: Control territory, chokepoints, high-quality resource nodes

Establishing a Base:

Requirements:

- Reach Level 5 in any game mode
- Possess 1 Noble (given at start; additional earned/won/purchased)
- Pay construction costs (materials + HB)
- Select location

Land Quality System:

Land grades affect production:

- **Grade A (Rare):** +40% production, premium look
- **Grade B:** +25% production
- **Grade C (Common):** Standard production
- **Grade D:** -15% production
- **Grade E (Poor):** -25% production

Location Selection:

- Manual choice: Pick any spot (grade revealed after construction)
- Surveyor Probe (2 per account): Randomly selects location, guaranteed Grade B or higher

Maximum Bases:

- Standard: 3 bases (unlocked at Levels 5, 12, 22)
- With Rare Nobles (won in events): Up to 5 bases total

Base Buildings and Upgrades:

Similar to a spaceship, bases have upgradeable sections:

- Mining Equipment (extracts minerals)

- Processing Facilities (refines resources)
- Farms (grows food)
- Oil Refinery (produces fuel)
- Teleporter (transfers resources to ship)
- Defences (walls, guns, shields)
- Barracks (trains troops)

Each upgrade increases production, storage, and defensive strength.

Defence and Conquest:

Shields: When your spaceship's main shield is active, land bases automatically shield too

Vulnerability: Shields drop when:

- Your spaceship shield deactivates
- You launch an attack on another player
- Random 1-3 hour windows even when the main shield is up

Conquest Mechanism:

Other players can capture your land base by:

1. Attacking 5+ times to lower "loyalty" (defender can rebuild loyalty)
2. Sending a Noble with escort troops on the final attack
3. Occupying for 10+ minutes without being defeated

If conquered:

- Base ownership transfers to the attacker
- You lose that base's production
- Attacker gains base with original civilisation bonuses intact (civilisation-specific tech remains)

Retaking Lost Bases:

You can recapture your former base:

- Attack with your own Noble
- Defeat defending forces
- Occupy for 10+ minutes
- Base returns to you at pre-conquest level (no loss of upgrades)

Strategic Importance:

Top players prioritise:

- Grade A land (maximum production)
- Defensible locations (near ally colonies)
- Resource diversity (one base mining, one farming, one oil)
- Upgrading evenly (balanced economic foundation)

Land-based income often exceeds spaceship production, making them critical for competitive play.

08 Fair Play Economics

8.1 Anti-Pay-to-Win

Design Philosophy

The Core Principle:

"Money should accelerate progression, not guarantee victory. Skill, strategy, and time investment must always outweigh wallet size."

Why This Matters:

Traditional free-to-play games optimise for "whale" spending (top 0.1% spending \$10,000+), creating:

- Frustrated free players who can't compete
- Toxic communities, where money beats skill
- Short-term revenue spikes followed by player exodus

Hyper Tek optimises for **long-term engagement** across all player types:

- Free players have clear paths to competitive power
- Moderate spenders (\$10-50/month) remain relevant
- Big spenders progress faster but hit skill/time ceilings

Implementation Across Systems:

1. Random Acquisition (*Can't Buy Victory*):

Legendary NFAs and game-changing items **cannot be directly purchased**. They're acquired only through:

- Tournament placement (top 20)
- Random loot package drops (2-5% rates, disclosed)
- Exceptional quest completions
- Community event participation

A player spending \$1,000 has the **same chance** at a Legendary drop as someone who earned the same package through 50 hours of gameplay.

2. Stat Caps (*Diminishing Returns*):

Every item category has maximum bonuses:

- Fuel efficiency capped at +50%
- Attack bonuses capped at +60%
- Production speed capped at +75%
- Shield strength capped at +100%

Stacking multiple items hits diminishing returns:

- First item: 100% effectiveness
- Second item: 75% effectiveness
- Third item: 50% effectiveness
- Fourth+ items: 25% effectiveness

Example:

- **Rare Fuel Specialist:** +20% efficiency (full value)
- **Epic Fuel Engineer:** +30% efficiency (additional +22.5% after diminishing returns)
- **Total:** +42.5% (not +50%)

This prevents "wallet stacking" where buying everything guarantees overwhelming advantage.

3. Tech Tree Depth (*Time > Money*):

The Research University contains 160-200+ technology levels requiring:

- Time investment (hours to days per level)
- Experience points (earned only through gameplay, not purchasable)
- Resources (which can be purchased, but requires time to use)

Scenario:

- **Player A:** Level 25, spent \$500, rushed everything → Under-teched (tech levels ~60)
- **Player B:** Level 15, spent \$50, invested 100 hours → Well-teched (tech levels ~80)

Result: Player B wins because tech bonuses compound, providing +40-50% advantages across all systems.

You can buy Time Clocks to speed research, but you can't buy the progression itself.

4. Matchmaking Bands (*Fair Competition*):

Overlord Realm:

- Colonies face opponents within $\pm 20\%$ power level
- New players are protected from veterans until Level 12+ and milestone completion
- Monthly league tiers keep similar-strength players competing

Hyper Racing:

- Racing leagues divided by vehicle class (amateur → semi-pro → professional)
- Bracketed by player level ranges
- Tournament matchmaking uses ELO-style ratings

Hyper Quest:

- Planetary zones publish difficulty/danger ratings
- High-risk zones restrict entry until qualification level reached
- Pirates can only attack players within level ranges (prevents grieving)

5. Skill Expression (*Player Ability Matters*):

Racing: Manual vehicle tuning, racing line optimisation, pit strategy, boost management.

Overlord: Troop composition, timing attacks, resource allocation, diplomacy.

Hyper Quest: Route planning, risk assessment, asteroid navigation, combat tactics.

A skilled free player beats an unskilled spender because **player decisions determine outcomes**, not just character stats.

8.2 Skill-Based Progression Systems

What Separates Good Players from Great:

Knowledge Mastery:

The Tech Skills Library teaches game mechanics:

- **Aerodynamics:** Optimal vehicle setups for each circuit
- **Cornering:** Ideal racing lines through specific turn types
- **Fuel Management:** Calculating pit stop strategies
- **Composite Development:** Crafting optimal material blends

Players who invest time learning gain 15-30% performance edges independent of spending.

Strategic Depth:

Overlord Realm:

- Reading opponent probabilities (when shields are down)
- Resource flow optimisation (which bases produce what)
- Colony politics (forming alliances, coordinating attacks)
- Event timing (when to push aggression vs. turtling)

Hyper Racing:

- Track-specific vehicle configurations
- Weather adaptation (rain, wind, zero-G sections)
- Opponent behaviour prediction (who brakes early, who cuts corners)
- Risk management (push for 1st vs. secure 3rd place)

Hyper Quest:

- Contract selection (balancing risk/reward/time)
- Route planning (shortest path vs. safest path vs. resource-rich path)
- Pirate evasion tactics (asteroid field navigation)
- Material prioritisation (what to mine, what to ignore)

Execution Excellence:

Racing: Precision control, split-second reactions, consistency over 50+ lap races.

Overlord: Multitasking (managing offence + defence simultaneously), quick adaptation to changing battlefield.

Quest: High-pressure decisions (fight pirates or flee? salvage ship or keep moving?)

Learning Curve Rewards:

Hyper Tek intentionally has a **moderate learning curve**:

- First 10 hours: Grasp basic mechanics
- 50 hours: Understand strategic layer
- 100+ hours: Master optimisation

This time investment creates expertise that spending can't replicate.

Data-Driven Balancing:

Monthly analytics review:

- Win rates by spending tier (free, \$1-25, \$25-100, \$100+)
- Top 100 player spending distribution
- Legendary NFA impact on outcomes

Balance Target:

- Top 10% spenders should win 35-45% of matches (not 80%+)
- Free players should place in the top 20% at least 15% of the time
- Skill-based metrics (racing lap times, successful Overlord defences) should correlate more strongly with wins than spending

If data shows pay-to-win creep, immediate nerfs target purchased advantages.

8.3 Matchmaking and Balance Mechanics

Overlord Realm Power Level Bands:

Power Level Calculation: *Sum of:*

- Spaceship upgrade levels × weighting
- Troop quantities and levels
- Technology research completion %
- Officer levels and rarities
- Land base production rates

Matchmaking:

- Players see opponents within $\pm 20\%$ power level on map
- Can attack anyone, but attacking much weaker = negligible rewards
- Attacking much stronger = likely defeat, but a learning opportunity

Colony Warfare:

- Colonies matched by total member power
- Tournament brackets place similar-strength colonies together
- Season-long leagues with promotion/relegation

Hyper Racing Leagues:

Vehicle Class System:

- **Class E (Basic):** Entry-level vehicles
- **Class D:** Moderate upgrades
- **Class C:** Significant customisation
- **Class B:** High-performance builds
- **Class A:** Elite, maxed vehicles
- **Class S:** Legendary, rare configurations

Players race within their class. Upgrading a vehicle moves you up classes.

Time Trial Leaderboards:

- Separate boards per circuit per class
- Ghost replays of top performers
- Transparent comparison (can't claim pay-to-win when ghost shows optimal line)

Hyper Quest Danger Zones:

Planetary Zone Ratings:

- Safe Zones (0-15% MTR): Open to all players
- Moderate Zones (15-35% MTR): Level 8+ recommended
- Dangerous Zones (35-55% MTR): Level 15+ required
- Extreme Zones (55-70% MTR): Level 25+ required

Pirate Attack Restrictions:

- Can't attack players 10+ levels below you
- Extreme wealth disparities prevent attacks (grieving protection)
- Attacking newbies provides minimal loot (disincentive)

8.4 Random Acquisition Models

Loot Package Transparency:

All packages disclose:

- Total number of items
- Rarity distribution (e.g., "1 Guaranteed Rare+, 3 Uncommon+, 5 Common+")
- Exact drop rates for each tier (complies with loot box regulations)

No Duplicates (*Protection*):

If you receive a duplicate NFA, automatically converts to:

- 80% of reserve value in HB (immediate compensation)
- Or exchange for a different item of the same rarity (player choice)
- Players can trade or hire out

This prevents the frustrating "opened 10 packages, got the same item 4 times" experience.

Pity System (*Bad Luck Protection*):

After opening 50 packages without a Legendary drop:

- Next package has 100% Legendary guarantee
- Counter resets
- Applies across all package types

Event-Based Guarantees:

Special promotions:

- "Buy 5 packages, get 1 Rare guaranteed"
- "Tournament participation: Minimum Epic reward"
- "Weekly quest chain completion: Choose 1 Rare from selection"

These provide deterministic paths alongside randomness.

Crafting System (*Alternative to RNG*):

Players can craft specific items by:

- Gathering required materials (deterministic farming)
- Reaching appropriate tech levels
- Paying crafting costs

Example:

- Craft Aerodynamic Specialist with increased bonuses:
 - **Requires:** 100,000 Composite Materials, 50,000 Resin, 25 Energy Crystals
 - Tech level 18 in Aerodynamics
 - Crafting time: 48 hours (can use speed-ups)
 - **Cost:** 50,000 HB

This offers grindable certainty as an alternative to random luck.

8.5 Tech Tree Depth and Time Investment

The Great Equaliser:

Technology research is the single most important progression system because:

- Provides massive bonuses (cumulative 400-500%+ advantages)
- Requires time investment (hundreds of hours to max)
- Cannot be rushed beyond Time Clock acceleration (which still requires time online)
- Creates permanent character power unaffected by market prices

Research Categories:

1. **Engine Technology** (25 levels)
2. **Weapon Technology** (25 levels)
3. **Armor & Defense** (25 levels)
4. **Mining & Resources** (22 levels)
5. **Medical & Healing** (20 levels)
6. **Agricultural Production** (20 levels)
7. **Structural Engineering** (23 levels)
8. **Energy Systems** (25 levels)

Total: 185 levels requiring 500-1,000+ hours to max (or equivalent Time Clock usage costing millions of HB).

Per-Level Requirements:

Early Levels (1-10):

- **Time:** 2-8 hours
- **Cost:** 5,000 - 25,000 HB + materials
- **Prerequisite:** Previous level completed

Mid-Levels (11-18):

- **Time:** 12-48 hours
- **Cost:** 50,000 - 150,000 HB + materials
- **Prerequisite:** Other trees at minimum thresholds (interdependencies)

High Levels (19-25):

- **Time:** 3-7 days
- **Cost:** 250,000 - 1,000,000 HB + rare materials
- **Prerequisite:** Multiple trees at Level 15+, character Level 30+

Time Investment Cannot Be Skipped:

Even with infinite money, you are limited by:

- Real-time research progression (can only reduce by 50-75% with Time Clocks)
- Prerequisite chains (must complete Level 1 before Level 2, etc.)
- Interdependencies (Can't reach Engine Tech Level 20 without Fuel Tech Level 15)

The Power Differential:

Scenario Comparison:

Player A: Level 20, spent \$200, tech levels average 5

- **Attack bonus:** +25%
- **Defence bonus:** +20%
- **Production speed:** +30%
- **Total Power:** 1,000

Player B: Level 20, spent \$50, tech levels average 15 (invested 200 hours)

- Attack bonus: +85%
- Defence bonus: +70%
- Production speed: +110%
- **Total Power:** 2,400

Player B wins decisively because tech bonuses compound multiplicatively.

Veteran Advantage Over Time:

Hyper Tek rewards tenure and dedication:

- **Month 1:** Spenders have the edge (better items, faster progression)
- **Month 3:** Time investment equalises (tech levels catching up)
- **Month 6+:** Veterans dominate (maxed tech trees, game knowledge)

This creates a **marathon, not a sprint**, discouraging pay-to-win while rewarding commitment.

09 The Living Economy

9.1 Pit Lane Marketplace (Racing)

Your Hub for Vehicle Commerce

The Pit Lane Marketplace serves as Hyper Tek's primary trading hub for all racing-related assets, accessible from your garage interface and from all three game modes.

What Can Be Traded:

Vehicles:

- Complete racing vehicles (from basic to legendary builds)
- Custom configurations with unique upgrade combinations
- Rare vehicle models (limited edition designs)
- Vehicle blueprints (allows buyer to craft identical copy)

Parts and Components:

- Engines (chemical → nuclear → fusion → hyperdrive)
- Body panels and aerodynamic kits
- Lift drive systems
- Cooling systems and fuel cells
- CPU modules and sensor arrays
- Air brakes and control surfaces

Team Specialists:

- All rarity tiers (Common → Legendary)
- Different specializations (fuel, structural, aerodynamic, etc.)
- Various experience levels (Recruit → 1st Class)

Materials and Resources:

- Bulk material packages
- Rare composites and alloys
- Energy crystals and fuel
- Time Clocks and speed-up items

Marketplace Interface:

Browse Categories:

- Search by item type, rarity, price range
- Filter by bonuses (e.g., "Show all specialists with +25%+ fuel efficiency")
- Sort by price (low to high), newest listings, ending soon (auctions)

Listing Details Display:

- 3D preview model (vehicles, specialists)
- Complete stat breakdown
- Seller reputation score
- Current bid / Buy Now price
- Reserve value (for NFAs)
- Time remaining (auctions)
- Transaction history (previous sales prices)

Auction System:

Creating Listings:

1. Select item from inventory
2. Choose auction or fixed price
3. Set starting bid (minimum: reserve value for NFAs)
4. Set Buy Now price (optional)
5. Choose duration (1, 3, 7 Days)

Bidding Process:

- Place bid (must exceed current by minimum increment)
- Automatic bid proxy (set maximum, system bids incrementally for you)
- Last-minute bids extend auction by 5 minutes (prevents snipping)
- Outbid notifications via in-game mail and push notifications

Commission Structure:

Standard Sales: 8-14% platform commission

- Example: Vehicle sells for 100,000 HB → Seller receives 92,000 - 86,000HB

Revenue Distribution:

- 50% to reserve fund (NFA buyback guarantees)
- 30% to platform operations
- 20% to development and new features

Reserve Value Protection:

For all NFA listings:

- Platform automatically sets minimum bid at current reserve value
- Prevents accidental underpricing
- If no bids meet reserve after auction ends, item returns to seller (no forced sale)

Market Dynamics:

Supply and Demand:

- Popular specialists (Fuel Engineers, Aerodynamic Specialists) command premium prices
- Seasonal demand spikes (racing tournaments increase vehicle part sales)
- Material prices fluctuate based on current event requirements
- "Market watch" feature shows trending items and price movements

Price Discovery:

- Historical sales data publicly available
- "Similar items" comparison shows recent sales
- Community price guides maintained by players
- Professional traders emerge (buying low, selling high)

Anti-Manipulation Measures:

- Transaction velocity limits (can't list 50 items simultaneously)
- Wash trading detection (buying your own listings flagged)
- Price fixing monitoring (coordinated listing patterns investigated)
- Suspicious activity triggers manual review

9.2 Colony Trade Markets (Overlord)

Internal Economy Within Colonies

Each colony operates its own trade market, facilitating resource exchanges between members.

Trade Market Mechanics:

Material Exchange System:

Instead of direct HB purchases, players request specific materials and offer others in return:

Example Trade Request:

Player: WarriorKing42

Wants: 50,000 Composite Materials

Offers: 25,000 Energy Crystals + 100,000 Crude Oil

Ratio: 2:1 (receiving 2x value vs. giving)

Expires: 24 hours

Colony members can accept, counteroffer, or ignore.

Why Trade vs. Sell:

- Lower commission (15% vs. 20% in Pit Lane)
- Guaranteed trusted partners (colony reputation)
- Specific material needs met instantly
- Supports colony cohesion (helping members = colony strength)

Colony Marketplace Buildings:

Auction House:

- Level 1: Basic functionality, 18% commission
- Level 5: Improved search features, 15% commission
- Level 10: Advanced filtering, buyer protections, 12% commission

Members donate resources to upgrade buildings, receiving:

- Colony reputation points
- Discount vouchers
- Access to colony-exclusive deals
- Recognition on contribution leaderboards

Trade Market:

- Level 1: Material exchanges only, 17% commission
- Level 5: Bulk trading options, 15% commission
- Level 10: Futures contracts (pre-order materials), 12% commission

Specialized Trading:

Resource Pools:

- Colony maintains shared stockpile
- Members contribute excess resources
- Others withdraw when needed (tracked)
- Contribution ratios determine access rights

Example:

- Player A contributed 30% of pool resources
- Pool contains 1M total materials
- Player A can withdraw up to 300,000 materials
- Replenishes as they contribute more

Bulk Discount Programs:

Colonies negotiate with platform:

- Purchase 1M+ materials → 10% discount
- Order distributed among members
- Each pays their share
- Savings significant for active colonies

Inter-Colony Trading:

Diplomatic Exchanges:

- Allied colonies can access each other's markets
- Cross-colony trade agreements (reduced commissions)
- Resource supply contracts (regular shipments)

Colony vs. Colony Economics:

- Competitive undercutting (rival colonies lower prices)
- Strategic resource hoarding (control rare material supply)
- Economic warfare (flooding markets to crash prices)

This creates **meta-game depth** where colony economic policy matters as much as military power.

Reputation System:

Trader Reputation Scores:

- Based on completed trades, delivery times, accuracy
- Displayed next to usernames
- High reputation unlocks benefits:
 - Lower commissions
 - Priority in trade request queues
 - Access to high-value exclusive deals
 - Voting rights in colony economic policy

Dispute Resolution:

- If trade goes wrong (materials not received, wrong items sent)
- Colony leadership can arbitrate
- Platform provides escrow system (holds items until both parties confirm)
- Repeated violations → trading restrictions

9.3 Request Board System (Hyper Quest)

The Courier Economy

The Request Board in Hyper Quest creates a dynamic logistics network where players transport cargo between planets for profit.

How Request Contracts Work:

Contract Generation:

Computer-generated contracts appear every 15 minutes:

- Randomised cargo types (medical supplies, luxury goods, raw materials, equipment)
- Randomised destinations (7 off-world planets)
- Randomised payment amounts (based on risk, distance, urgency)
- Published MTR (Merciless Terrain Rating = pirate attack probability)

Example Contract:

CONTRACT #A47821

Cargo: Advanced Engine Components (4 units, 2,000 kg)

From: Planet Aeloria (current location)

To: Planet Mechanos

Distance: 847 light-years (28 minutes real-time travel)

Payment: 125,000 HB

Insurance Required: 15,000 HB (25% refund on successful delivery)

Deadline: 2 hours

MTR: 45% (High Risk)

Bonus: +50,000 HB if delivered under 1 hour

Penalty: -50% payment if deadline is missed

Accepting Contracts:

Limitations Based on Level:

- Level 10-14: Max 1 contract simultaneously
- Level 15-19: Max 2 contracts
- Level 20-24: Max 3 contracts
- Level 25-29: Max 4 contracts
- Level 30+: Max 5 contracts

Cargo Capacity:

- Based on Quest Runner cargo hold upgrades
- Weight limits prevent overloading
- Volume limits (some items are bulky but light)
- Specialised containers for hazardous materials

Strategic Decision-Making:

Risk Assessment:

- High MTR = High payment but high pirate danger
- Low MTR = Lower payment but safer travel
- Time pressure = Bonus opportunity but stressful

Route Planning:

- Direct path (shortest time, moderate resource zones)
- Scenic route (longer but with asteroid mining opportunities)
- Safe passage (avoid high-MTR areas, sacrifice mining)

Multi-Contract Optimisation:

- Accepting 3 contracts, all going to Planet Crystallia
- Single trip serves all three deliveries
- Maximises efficiency, multiplies profits
- But all cargo is at risk if attacked

Insurance Mechanics:

How Insurance Works:

Upfront Payment:

- Pay 10-20% of contract value as insurance
- Example: 100,000 HB contract → 15,000 HB insurance

Successful Delivery:

- Receive 25-30% of insurance back
- Plus, full contract payment
- Example: Return 4,500 HB + 100,000 HB = 104,500 HB total

Failed Delivery (Missed Deadline):

- Forfeit insurance (0% back)
- Receive 50% contract payment
- Example: 0 HB insurance + 50,000 HB = 50,000 HB total

Failed Delivery (Pirate Attack):

- Forfeit insurance (0% back)
- Receive 0% contract payment
- Example: Lost 15,000 HB + 0 HB = -15,000 HB loss
- Plus, any cargo/items stolen

Insurance Protects NPCs/Platform, not players—it's a risk fee.

Pirate Economy:

Becoming a Pirate (Player Choice):

Any player can become a pirate by:

- Disabling ship transponder (costs HB, makes you hostile)
- Hunting other players in Dead Zones
- Stealing cargo for direct profit

Pirate Rewards:

- Looted cargo can be delivered for 60-75% of the original contract value
- Stolen materials kept
- Captured team specialists ransomed back or kept
- Reputation as feared pirate (cosmetic titles, unique items)

Pirate Risks:

- Other players can hunt you back
- Can't enter Safe Zones while the transponder is disabled
- Higher chance of being attacked by other pirates
- Reputation loss in legitimate markets

Pirate vs. Courier Dynamic:

- Creates organic PvP tension
- Couriers can hire escorts (paying other players to protect)
- Convoy systems (multiple players travelling together)
- Intelligence networks (sharing pirate locations in colony chats)

Specialist Courier Players:

Some players specialise entirely in Hyper Quest logistics:

Professional Couriers:

- Accept only high-value, high-risk contracts
- Invest heavily in ship speed and defence upgrades
- Develop optimal routes through dangerous zones
- Build reputations for reliability

Earnings Potential:

- Casual courier: 50,000 - 150,000 HB per session (2-3 hours)
- Professional courier: 300,000 - 800,000 HB per session
- Elite courier (top 100 globally): 1,000,000+ HB per session

Monthly Income:

- Professional: \$200-500 USD equivalent
- Elite: \$1,000-3,000 USD equivalent

Economic Impact:

The Request Board drives interplanetary resource distribution:

- Materials abundant on Planet A become available on Planet B
- Price arbitrage opportunities (buy low on one planet, sell high on another)
- Supply chain logistics (players organising resource flows)
- Strategic resource control (colonies monopolising certain routes)

9.4 Player-to-Player Trading

Direct Trades Outside Marketplaces:

While marketplaces charge commissions, players can negotiate direct trades:

Trade Request System:

Initiating Trade:

1. Right-click another player's name (in-game, chat, or profile)
2. Select "Request Trade"
3. Opens trade window showing both inventories

Trade Window Interface:

YOUR OFFER		THEIR OFFER	
25,000 HB		Epic Fuel Eng.	
50,000 Composite		10 Time Clocks	
Rare Vehicle Part			
[Add Items]	[Remove]	[Lock Offer]	
[Confirm]		[Cancel]	

Security Features:

- Both players must lock and confirm before the trade executes
- Can review all items before finalising
- Trade history permanently recorded
- Report scams/bugs through support

Common Trade Scenarios:

Bartering:

- "I'll trade you my Epic Structural Engineer for your Legendary Fuel Specialist plus 100,000 HB"
- Negotiations via chat or voice
- Flexibility not available in auctions

Bulk Deals:

- "Selling 1M materials, 500,000 HB, direct trade only"
- Avoids marketplace commissions (saves 8-14%)
- Both players profit vs. marketplace prices

Specialised Exchanges:

- Swap duplicate NFAs, both players need
- Trade time-sensitive items (event-exclusive cosmetics)
- Exchange favours (boost my colony in the event, I'll boost yours next)

Trust and Reputation:**Verified Traders:**

- Players with 100+ successful trades earn the "Trusted Trader" badge
- Displayed on profiles
- Reduces fraud risk

Escrow Services:

- High-value trades (>1,000,000 HB equivalent) can use platform escrow
- Small fee (2%) but guarantees both sides deliver
- Third-party verification

Scam Prevention:

- Can't trade items worth vastly different values without a confirmation warning
- "This trade seems unfair. Are you sure?" pop-up if detected imbalance
- New account restrictions (can't trade for 7 days, building trust period)

Gift Economy:**Helping New Players:**

- Veterans donate starter specialists to newcomers
- Colony members support each other (free materials for building)
- Mentorship programs (experienced players guide beginners)

Holiday Gifts:

- Special events encourage gifting (bonus rewards for both parties)
- Secret Santa systems (randomised gift exchanges)
- Community-building through generosity

9.5 Virtual Business Creation

The Game Within the Game:

Hyper Tek's most ambitious feature: players can establish actual businesses inside the game economy, earning real income.

Land Ownership:

Purchasing Virtual Land:

- Land plots available on all 8 planets (home world + 7 off world)
- **Sizes:** Small (500m²), Medium (2,000m²), Large (10,000m²), Mega (50,000m²)
- **Prices:** 500,000 HB to 10,000,000+ HB depending on size and location

Location Matters:

- Near harbour spaceports (high traffic)
- Near popular racing circuits
- Near colony bases (built-in customer base)
- Scenic locations (status symbol)

Building on Land:

Structure Types:

Shops and Storefronts:

- List items for sale (materials, crafted goods, services)
- Customise appearance (signage, interior, decorations)
- Hire NPC staff or pay player employees
- Set your own prices (compete on the marketplace)

**Warehouses:**

- Store massive quantities of materials
- Rent storage space to other players
- Organise logistics networks
- Distribution centers for courier businesses

Processing Facilities:

- Refineries (convert crude resources to finished materials)
- Manufacturing plants (craft components at scale)
- Research labs (develop unique item variations)
- Offer services to other players (process their materials for a fee)

Repair Shops:

- Players bring damaged vehicles/ships
- You repair for HB payment
- Faster service = premium pricing
- Specialisation (racing vehicles only, combat ships only)

Fueling Stations:

- Stock various fuel types
- Sell to passing players (especially couriers)
- Competitive pricing strategies
- Loyalty programs (discounts for repeat customers)

Entertainment Venues:

- Virtual casinos (approved games only, regulated)
- Tournament viewing parties
- Social hangout spaces

Economic Gameplay:

Supply Chain Management:

- Source raw materials (buy from miners)
- Process into finished goods (operate refinery)
- Sell to consumers (operate retail shop)
- Profit margin optimisation

Example Business:

"Crystal Clear Fuel Co."

Business Model:

1. Purchase crude oil from Overlord players (0.5 HB per unit)
2. Refine into premium racing fuel (facility on owned land)
3. Sell to Hyper Racing players (3 HB per unit)
4. Profit margin: 2.5 HB per unit (after operating costs)
5. Volume: 100,000 units per week
6. Weekly profit: 250,000 HB = \$1,000 USD

Competitive advantages:

- Location near a major racing circuit
- Loyalty discount program
- Sponsored by a famous racing team
- Faster refining (hired top Fuel Specialists)

Hiring Employees:

Player Workforce:

- Post job listings (wages, requirements, duties)
- Hire other players as employees
- Pay salaries in HB (weekly or per-task)

- Delegate operations (mining, crafting, sales, customer service)

Example Job Listing:

HIRING: Resource Collector

Business: Galaxy Mining Consortium

Wage: 25,000 HB per week + 10% bonus on targets exceeded

Hours: 10 hours per week (flexible schedule)

Duties: Mine 500,000 minerals on assigned planets weekly

Requirements: Level 15+, Mining Tech Level 10+, Quest Runner with adequate cargo

Benefits for Employees:

- Steady income without entrepreneurial risk
- Learn business operations
- Build reputation in specialized roles
- Network with successful players

Benefits for Employers:

- Scale operations beyond personal capacity
- Focus on strategy while others execute
- Creating community around business
- Mentorship opportunities

Real World Business Integration:

The Hybrid Model:

Players with real-world businesses can create virtual franchises:

Example:

Real Business: "Tony's Pizza" (Chicago, Illinois)

Virtual Business: "Tony's Virtual Pizzeria" (Planet Aeloria, Hyper Tek 100)

Integration:

- Tony builds virtual restaurant on high-traffic land
- Lists menu items as in-game products
- Player's "order" pizza through the game interface
- Order data sent to real Tony's Pizza
- Real pizza delivered to the player's real address
- Tony pays Hyper Tek 8% commission on orders
- Players get in-game cosmetic bonus ("Pizza Lover" title, special decal)

Advertising Reach:

- Thousands of local players see virtual storefront
- Cheaper than traditional digital advertising
- Gamification increases engagement
- Builds brand loyalty through fun interaction

Other Real-World Integrations:

- Coffee shops offering virtual cafes (order real coffee)
- Gyms offering virtual training centers (book real classes)
- Bookstores offering virtual libraries (order real books)
- Music stores offering virtual concert venues (buy real tickets/merch)

Platform Requirements:

- Must be a legitimate registered business
- Compliant with local regulations
- Age-appropriate products only
- Platform approval required

Revenue Share:

- Platform takes 10-15% commission
- Lower than typical delivery app fees (30%+)
- Exclusive geographic territories (one pizza place per zone)

Economic Metrics and Transparency:**Business Analytics Dashboard:**

- Daily revenue and expenses
- Customer traffic patterns
- Popular products/services
- Competitor analysis
- Profit margins and trends

Leaderboards:

- Top-earning businesses by category
- Most-visited shops
- Highest customer satisfaction ratings
- Recognition drives additional traffic

Economic Impact Data:**Hyper Tek publishes quarterly reports:**

- Number of active player businesses
- Total virtual-to-real transactions
- Average player business income
- Largest success stories
- Economic velocity (how much HB changes hands)

This transparency builds trust and showcases opportunities.

10 Marketplace

10.1 How to Buy, Sell, and Trade

Comprehensive Marketplace Guide:

Accessing Marketplaces:

From any game mode, press 'M' or click the Marketplace icon:

- Pit Lane Marketplace: Racing items, vehicles, specialists, general goods
- Colony Trade Market: Colony members only, material exchanges
- Global Auction House: Cross-platform, all item types

Buying Items:

Browse and Search:

SEARCH: "Fuel Specialist" [GO] |

Filters: |

☐ Rarity: All / Common / Rare / Legendary |

☐ Price: 0 - 1,000,000 HB |

☐ Level: Any / 1-10 / 11-20 / 21-30 |

☐ Auction / Buy Now Only |

Sort: [Price: Low to High ▼] |

ITEM LISTING VIEW:

[IMAGE]	Epic Fuel Specialist
Level 12	+28% Fuel Efficiency
Current Bid:	85,000 HB
Buy Now:	150,000 HB
Time Left:	4h 23m
Seller:	RaceKing99 ★★★★★ (142 sales)
[Place Bid]	[Buy Now] [Watch]

Bidding Process:

1. Enter bid amount (must exceed current bid by minimum increment: 5%)
2. Confirm funds available in the account
3. Bid placed; becomes current high bidder
4. Receive notification if outbid
5. If still the highest bidder when the auction ends, win the item automatically

Buy Now Option:

- Instant purchase at a fixed price
- Bypasses auction waiting
- Typically, 30-50% premium vs. auction final prices
- Guarantees acquisition

Watchlist Feature:

- Save items for later viewing
- Receive ending-soon notifications
- Compare similar items before bidding
- Track price trends

Selling Items:

Creating Listings:

Step-by-Step:

1. Open Inventory
2. Select item to sell
3. Click "List on Marketplace"
4. Choose marketplace type (Pit Lane, Colony, Global)
5. Set parameters:

Timing:

- List during peak hours (evenings, weekends)
- Avoid listing during major events (players are busy racing/fighting)
- Coordinate expiration times (end during high-traffic periods)

Direct Trading:

Negotiated Trades:

Players can arrange custom trades via chat:

Example Negotiation:

PlayerA: "Selling Legendary Combat Officer, 800,000 HB"

PlayerB: "I'll give you 650,000 HB + Epic Fuel Specialist"

PlayerA: "Make it 700,000 HB + Epic Fuel Specialist and deal"

PlayerB: "Done. Send trade request"

Executing Direct Trade:

1. Right-click PlayerB's name
2. Select "Request Trade"
3. Both players add agreed items
4. Both lock and confirm
5. Trade completes instantly, no commission

Trade Safety:

- Both parties see exactly what's being exchanged
- Can't be defrauded if you confirm correctly
- Platform logs all trades (dispute resolution evidence)

10.2 Commission Structure

Why Commissions Exist:

Marketplace commissions fund:

- Platform operations and server costs
- Reserve fund for NFA buyback guarantees
- Anti-fraud monitoring and security
- Customer support
- Continuous development and improvements

Revenue Allocation:

Commission revenue distribution:

- 50% → Reserve Fund (NFA buyback guarantees)
- 20% → Platform Operations (servers, bandwidth, security)
- 15% → Development (new features, bug fixes)
- 10% → Customer Support and Moderation
- 5% → Marketing and Growth

Published in quarterly transparency reports.

10.3 Reserve Value System

The Guaranteed Minimum Buy-Back (GMBB) Fund described in Section 5.2 is the platform's single reserve value mechanism. There is no separate reserve calculation: every item's minimum value is the accumulated GMBB balance for that specific item, funded as a percentage of its sale price and vested on the five year schedule already described.

Public Transparency:

All NFAs display:

- Current GMBB Fund balance
- Balance history (chart showing changes over time)
- Vested payout amount, always visible (80-97% of balance depending on deposit age)
- Recent marketplace transactions

10.4 Auction Mechanics

Dynamic Pricing Through Competition:

Standard Auction Format:

Bidding Rules:

- Minimum increment: 5% above the current highest bid
- Example: Current bid 100,000 HB → Next bid must be $\geq 105,000$ HB

Proxy Bidding:

- Set maximum willing to pay
- System automatically bids the minimum necessary amount
- Example: You set max 200,000 HB, system bids 105,000 HB to beat the current 100,000 HB
- If someone bids 150,000 HB, system automatically counters with 157,500 HB
- Continues until your max is exceeded

Anti-Sniping Protection:

- If bid placed in last 5 minutes, auction extends by 5 minutes
- Continues extending with each last-minute bid
- Ensures everyone has the opportunity to respond

Auction Ending:

- Winner notified immediately via in-game mail, email, push notification
- Item transferred to the winner's inventory automatically
- HB deducted from the winner's account
- Seller receives HB (minus commission) instantly

Reserve Auctions:

Hidden Reserves (Seller Option):

- Seller sets secret minimum price
- If bidding doesn't reach reserve, the item doesn't sell
- Prevents forced sales below the desired price
- "Reserve Not Met" displayed if auction ends below reserve

Public Reserves (NFA Requirement):

- Platform-set minimum bid (reserve value)
- Publicly displayed
- Cannot be circumvented
- Protects value floor integrity

Dutch Auctions (Decreasing Price):

Alternative format (special events):

- Starts at a high price
- Decreases gradually over time
- First player to accept the current price wins
- Used for limited-time items, promotional NFAs

Group Buy Auctions:

Bulk Discount Mechanism:

- Seller lists 100 identical items
- Price decreases as more buyers join
- **Example:**
 - 1 buyer: 10,000 HB each
 - 10 buyers: 9,000 HB each
 - 50 buyers: 8,000 HB each
 - 100 buyers: 7,000 HB each
- Incentivises social coordination

Live Auction Events:

Special Tournament Weekends:

- Platform hosts live auctions (scheduled times)
- Ultra-rare NFAs, one-of-a-kind items
- Real-time bidding interface
- Community spectating (Twitch-style)
- Exaggerate generation and engagement

10.5 Safety and Fraud Prevention

Multi-Layered Protection:

Account Security:

Two-Factor Authentication (Required for marketplace):

- SMS codes
- Authenticator apps (Google Authenticator, Authy)
- Email verification
- Mandatory for listing items >100,000 HB value

Transaction Verification:

Large Purchases (>250,000 HB):

- Additional confirmation prompt
- "Are you sure?" safeguard
- 24-hour cooldown for new payment methods
- Fraud prevention system analyzes patterns

Email/SMS Confirmations:

- All marketplace transactions generate a notification
- Review activity regularly
- Report unauthorised transactions immediately

Fraud Detection Systems:

Automated Monitoring:

- Machine learning models identify suspicious activity
- Red flags:
 - Account selling all items suddenly (possible account theft)
 - Rapid-fire bidding from multiple accounts (wash trading)
 - Pricing far below market value (stolen accounts dumping assets)
 - New accounts transacting large volumes (money laundering)

Manual Review Queue:

- High value/suspicious transactions flagged for human review
- Support team investigates within 2 hours
- Can freeze transactions pending investigation
- False positives resolved quickly

Scam Prevention:

Common Scams and Protections:

Fake Trade Agreements:

All trades are to be done on the marketplace. Deals can be agreed in emails or DM, but ALL trades or sales are done on the marketplace to avoid issues. Item logged onto the marketplace, and funds lock in against the trade, and the swap will take place.

Same as hiring a specialist, the time limit is set on the marketplace and returned to the owner after the timeframe is up.

Phishing:

- Scammer: Fake email/site mimicking Hyper Tek, stealing login credentials
- Protection: Always verify URL (HyperTek100.com), never click suspicious links

Chargeback Fraud:

- Buyer purchases HB with credit card, buys items, then disputes credit card charge
- Protection: Platform covers sellers; fraudulent buyers permanently banned

Reporting System:

How to Report:

- Click "Report" button on listing, trade, or user profile
- Select category (fraud attempt, fraud, harassment, bug)
- Provide description and evidence (screenshots, chat logs)
- Submit

Response Timeline:

- Minor issues: 24-48 hours
- Fraud/scams: 2-6 hours
- Account theft: Immediate (priority response)

Consequences for Violations:**Tiered Penalty System:****First Offence** (*Minor*):

- Warning + education
- No lasting consequences

Second Offence:

- 7-day marketplace suspension
- Cannot list, bid, or trade
- Reputation score hit

Third Offence:

- 30-day marketplace ban
- Permanent reputation damage

Severe Violations (Fraud, Theft):

- Immediate permanent ban
- Account frozen
- Assets locked
- Legal action if necessary (theft, money laundering)

Buyer Protection:**"Item Not as Described":**

- If item received doesn't match listing details
- File dispute within 48 hours
- Platform reviews evidence
- Refund issued if seller misrepresented item

This shouldn't happen as the marketplace, using serial numbers on ALL assets, will confirm what someone is selling and list it in a typical format for all assets.

11 Community

11.1 Discord and Social Media Presence

Where the Community Lives:

Official Discord Server:

Structure:

#announcements (read-only, official news)
#general chat (open discussion)
#game-help (questions answered by community + mods)
#overlord-realm (strategy discussions)
#hyper-racing (racing tips, vehicle builds)
#hyper-quest (courier routes, pirate warnings)
#marketplace (trading, price discussions)
#content-creators (streamers, YouTubers)
#bug-reports (technical issues)
#feature-suggestions (player ideas)
Voice Channels (colony coordination, tournaments)

Active Moderation:

- 24/7 coverage by community moderators
- Developer pop-ins (AMAs, Q&A sessions)
- Weekly community events (trivia, tournaments)
- Exclusive Discord-only giveaways

12 Team

The People Behind Hyper Tek 100

A Committed and Capable Team

Hyper Tek is built by a dedicated team combining gaming expertise, technical capability, and unwavering commitment to creating something meaningful. This isn't just another game project; it's a mission to prove that entertainment and social impact can coexist and provide profitably.

Leadership

The project is led by an ex-aerospace technician who has made a substantial personal investment in the development of Hyper Tek 100. This leadership brings vision, business acumen, and a deep commitment to the Gaming for Good mission that drives the entire project.

Marketing and Community

The team includes a dedicated marketing manager responsible for campaign strategy, community building, social media management, and the upcoming early access campaign. This expertise is critical for player acquisition and building the engaged community that Hyper Tek needs to thrive.

Development and Design

Significant development work has been completed, including comprehensive game design documentation, 3D character and vehicle models, environment assets, and technical architecture planning. The team has created detailed mechanics for all three interconnected games and established the framework for fair-play economics and the NFA system.

Our Commitment

This team has demonstrated serious commitment through years of development work and substantial personal investment. We're not testing concepts, we're building a complete, interconnected gaming universe with real economic systems and meaningful social impact.

We work with focus and determination to deliver something exceptional. Every decision prioritises long-term sustainability over short-term gains, player experience over exploitation, and quality over speed

The People Behind Hyper Tek 100

A Committed and Capable Team

Hyper Tek is

What Sets Us Apart

- Deep Planning: Comprehensive documentation and design work completed
- Proven Dedication: Significant resources invested to reach this stage
- Technical Capability: Assets created, systems designed, infrastructure planned

Mission Focus: Genuine commitment to Gaming for Good objectives

This is a team that believes deeply in what we're building and has the skills, experience, and determination to make it succeed.

13 Roadmap

13.1 Completed Milestones

✓ Concept and Design:

- Core three-game interconnected universe concept finalised
- Fair-play economics framework established
- NFA buyback system designed
- Comprehensive game design documentation created
- Lore and world-building completed

✓ Asset Development:

- 14 playable characters designed (7 species, male and female versions)
- Main spaceship 3D models created
- Multiple racing vehicles modelled
- Approximately 30 specialist characters created
- Environment assets for promotional content

✓ Technical Planning:

- Game architecture designed
- Cross-game progression systems planned
- Economic systems documented
- NFA and marketplace mechanics defined
- Technology stack selected (Unreal Engine, cloud infrastructure)

✓ Business Foundation:

- Over \$440,000 invested in development, prototypes, legal work, and content creation
- Website established
- Pitch deck and marketing materials created
- Social media presence initiated

Current Status: Preparing for Early backers through limited edition releases.

13.2 Near-Term Goals (Next 6-12 Months)

Early Backer Campaign:

- Launch an early backer campaign targeting \$440K
- Video production and campaign page finalisation
- Community building and influencer partnerships
- Backer rewards and stretch goals

Funding and Team Expansion:

- Secure seed funding from investors and early backers
- Expand development team
- Hire additional programmers, artists, and designers
- Establish full-time operations

Core Development:

- Build functional versions of all three games
- Implement multiplayer infrastructure
- Develop marketplace and economic systems
- Create NFA smart contracts and blockchain integration
- Establish server infrastructure

Alpha/Beta Testing:

- Conduct closed alpha testing with early backers
- Gather feedback and iterate on design
- Open beta testing to a broader audience
- Balance gameplay and economic systems

13.3 Medium-Term Goals (12-24 Months)

Content Development:

- Expand racing circuits and vehicle options
- Develop additional planets for Hyper Quest
- Implement full colony warfare systems
- Create comprehensive progression systems
- Design and implement daily/weekly events

Platform Expansion:

- Launch on PC (Windows, Mac, Linux)
- Develop mobile versions (iOS, Android)
- Optimise for various hardware configurations
- Implement cross-platform play

Community and Competition:

- Establish competitive tournament infrastructure
- Launch content creator partnership program
- Build player councils and governance systems
- Organise first major competitive events

Economic Systems:

- Full marketplace launch across all three games
- NFA minting and trading goes live
- Virtual business system implementation

- Economic monitoring and balancing

Public Launch:

- Official public release
- Marketing campaign execution
- Target: 50,000+ monthly active users
- Path to profitability established

13.4 Long-Term Vision (24+ Months)

VR/AR Integration:

- Native VR support for all three games
- Partnerships with VR hardware manufacturers
- AR companion features
- Enhanced immersion and accessibility

Content Expansion:

- Additional game modes and features
- Seasonal content and events
- Community-driven content creation tools
- Expanded planetary systems

Long-Term Vision

The following are directions Hyper Tek 100 intends to explore. They are not commitments with a build date, and nothing in this section should be read as available today.

Location-based play. Bringing gameplay into open physical spaces using satellite and local positioning technology, so Hyper Tek 100 games can be played outdoors rather than only on a screen.

Real-world commerce integration. Linking purchases from real-world retail partners to in-game bonuses, and allowing businesses to run localised advertising or sponsorships inside the game.

Physical collectables. Certain NFCs may unlock the option to receive a matching physical trading card, verified by an embedded chip.

Each of these will be scoped, costed, and confirmed separately before any commitment is made public.

13.5 Important Note: This Roadmap is Subject to Change

Flexible and Adaptive Development:

This roadmap represents our current vision and planned trajectory for Hyper Tek. However, **timelines, priorities, and specific features are subject to change** based on multiple factors:

Funding Timeline:

- Development speed depends entirely on when and how much funding is secured
- Early backer campaign results will significantly impact our ability to execute
- Additional funding rounds may accelerate or modify the roadmap

Community Feedback:

- Player preferences and feedback will shape feature priorities
- What the community wants most will influence the development order
- Beta testing may reveal needed changes to core systems

Technical Discoveries:

- Development challenges may require timeline adjustments
- New technologies or tools may create opportunities for improvement
- Performance optimisation may take precedence over new features

Market Conditions:

- Competitive landscape changes may require strategic pivots
- Platform opportunities (new consoles, VR systems) may alter priorities
- Economic conditions may affect monetisation strategies

Resource Availability:

- Team size and expertise will determine realistic timelines
- Third-party dependencies (engine updates, service providers) may cause delays
- Unexpected challenges always arise in game development

Quality Over Speed:

We are committed to delivering exceptional experiences, which means we will **never sacrifice quality to meet arbitrary deadlines**. Features will launch when they're ready, balanced, and thoroughly tested, not when a calendar dictates. We'd rather delay a feature to get it right than rush something broken into players' hands.

Transparency Commitment:

As the roadmap evolves, we commit to:

- **Monthly Development Updates:** Regular progress reports on what we're working on
- **Honest Communication:** Clear explanations when timelines or priorities shift
- **Community Input:** Opportunities for players to influence roadmap priorities

Realistic Expectations: No over-promising features or timelines we can't deliver

What Won't Change:

While specifics may shift, our core commitments remain constant:

- Fair-play economics and anti-pay-to-win design
- NFA guaranteed buyback values
- Futureproof Hyper Tek market share with continued content
- Evaluate wearable gaming devices.
- Quality, polished experiences across all three games
- Transparency and community-first approach

Your Role in Shaping the Future:

As a backer, player, or investor, you're not just supporting a fixed roadmap; you're joining a journey where your voice matters. Community feedback, player preferences, and supporter input will actively shape what Hyper Tek becomes.

This roadmap is our best current plan, built on extensive design work and careful consideration. But we're humble enough to know that reality will teach us lessons, players will surprise us with insights, and the path to success may wind differently than we anticipate.

We're committed to the destination. The exact route may evolve.

14 Conclusion

The Hyper Tek Vision

Hyper Tek 100 is an ambitious vision to create an interconnected gaming ecosystem with a driven marketplace that addresses real problems in the industry.

Three interconnected games: Overlord Realm (MMORTS), Hyper Racing 100 (futuristic racing), and Hyper Quest 100 (RPG exploration), where progress, assets, and identity persist across all experiences. Players would enjoy fair-play economics, NFAs with guaranteed minimum buyback values, real economic opportunities, and future proofing of market share already in the pipeline.

Where We Stand:

Over \$440,000 has been invested personally to reach this stage. We have comprehensive game design documentation, 3D character and vehicle models, detailed economic systems, and complete technical planning. The foundation is built. The vision is detailed. The commitment is proven.

What We Need:

Funding to move from design to development. We're preparing an early backer campaign targeting \$440K and seeking seed investment to build the development team and bring this vision to life. With current resources limited, we need community support and investor backing to execute.

Our Promise:

Transparent communication, quality-focused development, and unwavering commitment to fair-play economics and our Gaming. We'll be honest about challenges and progress every step of the way.

Join Us:

Support our upcoming early backer campaign. Join our community. Help us prove that gaming can be fair, fun, and purposeful.
